REMARK:

Data have been collected from reliable literary sources and scientists working on vacuum deposition. Whilst great care has been taken to ensure that the information provided in this table is accurate, data should be used as a general guide and at your own risk. Do not hesitate to use a second source for very critical data or consult us.

PURITY

Purity is based on spectrographic values of trace metals found, i. e. 99.999% pure indicates that 0.001% (10 ppm) total of trace metals have been observed. 99.9% pure implies a total metallic impurity content of 0.1% (1000 ppm). Gases, Carbon and Sulfur are not included in the analysis but can possibly be determined if needed.

PARTICLE SIZES

Particle sizes are listed as determined with sieves. “-100, +325 mesh” means that all of the particles pass through a 100 mesh screen and are completely retained on a 325 mesh screen. “Mesh” indicates the number of sieve openings per linear inch.

CERTIFICATE OF ANALYSIS AND MSDS

All items are shipped with an analysis certificate. The analysis is specific to the actual lot of material being sent and not a “typical analysis”, unless specifically stated.

All dangerous materials are shipped attached by a Material Safety Data Sheet (MSDS).

CUSTOM MANUFACTURING

The particle sizes and purity listed are those most commonly used and called as. However Neyco can offer nearly any range of particle sizes desired, with purity needed on request.

Whether you require a product with only a minor variation from our standard material, a complete custom chemical synthesis, or a custom metal fabrication, Neyco is your source.

Potassium Borate	K ₂ B ₄ O ₇ ·H ₂ O	-6 mesh	99.9
Potassium Borohydride	KBH ₄	-80 mesh	98
Potassium Bromide	KBr	-10 mesh	99.9
Potassium Carbonate	K ₂ CO ₃	-10 mesh to -20 mesh	99.9 to 99.999
Potassium Chloride	KCl	-10 mesh to -20 mesh	99.999
Potassium Fluoride	KF	-60 mesh	99.9
Potassium Hexafluoroantimonate	KSbF ₆	-6 mesh	99.9
Potassium Iodate	KIO ₃ / KIO ₄	-80 mesh to -40 mesh	99.9
Potassium Iodide	KI	-10 mesh to -20 mesh	99.9 to 99.999
Potassium Molybdate	K ₂ MoO ₄	-200 mesh to -325 mesh	99 to 99.9
Potassium Niobate	KNbO ₃	-100 mesh	99.9
Potassium Perrhenate	KReO ₄	-40 mesh	99.9
Potassium Persulfate	K ₂ S ₂ O ₈	-100 mesh	99.9
Potassium Selenate	K ₂ SeO ₄	-100 mesh	99.5
Potassium Selenite	K ₂ SeO ₃	-100 mesh	99.5
Potassium Tantalate	KTaO ₃	-100 mesh	99.9
Potassium Tellurite	K ₂ TeO ₃	-100 mesh	99.5
Potassium Tungstate	K ₂ WO ₄	-100 mesh	99.5
Potassium Vanadate	KVO ₃ / K ₃ VO ₄ / K ₄ V ₂ O ₇	-200 mesh	99.9
Potassium Zirconate	K ₂ ZrO ₃	-200 mesh	99.5

*Purity based on metallic impurities.

PRASEODYMIUM Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Praseodymium	Pr	-40 mesh to -60 mesh	99.9
Praseodymium Boride	PrB ₆	-325 mesh	99.5
Praseodymium Bromide	PrBr ₃	-20 mesh	99.9
Praseodymium Chloride	PrCl ₃	-10 mesh to -100 mesh	99.9
Praseodymium Fluoride	PrF ₃	-60 mesh to -325 mesh	99.9
Praseodymium Hydride	PrH ₂₋₃	-60 mesh	99.9
Praseodymium Nitride	PrN	-60 mesh	99.9
Praseodymium Oxide	Pr ₂ O ₃ / Pr ₆ O ₁₁	-325 mesh	99.9 to 99.999
Praseodymium Silicide	PrSi ₂	-100 mesh to -325 mesh	99.5 to 99.9
Praseodymium Telluride	PrTe	-20 mesh	99.9

RHENIUM Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Rhenium	Re	-325 mesh	99.95 to 99.99
Rhenium Boride	ReB	-100 mesh	99.5
Rhenium Chloride	ReCl ₃ / ReCl ₄ / ReCl ₅	-40 mesh to -80 mesh	99.9
Rhenium Iodide	ReI ₃	-80 mesh	99.9
Rhenium Oxide	ReO ₂ / Re ₂ O ₇	-6 mesh to -100 mesh	99.95 to 99.99
Rhenium Selenide	ReSe ₂	-100 mesh	99.9
Rhenium Silicide	ReSi ₂	-80 mesh	99.9
Rhenium Sulfide	ReS ₂	-80 mesh	99.9
Rhenium Telluride	ReTe ₂	-60 mesh	99.9

RHODIUM Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Rhodium	Rh	-325 mesh	99.8 / 99.95

*Purity based on metallic impurities.

Rb
37

RUBIDIUM Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Rubidium Bromide	RbBr	-4 mesh	99.9
Rubidium Carbonate	Rb ₂ CO ₃	-20 mesh to -100 mesh	99.8 to 99.99
Rubidium Chloride	RbCl	-4 mesh to -20 mesh	99.9 to 99.99
Rubidium Chromate	Rb ₂ CrO ₄	-20 mesh	99.9
Rubidium Fluoride	RbF	-4 mesh to -325 mesh	99.9 to 99.99
Rubidium Hydroxide	RbOH·H ₂ O	-4 mesh	99.7
Rubidium Iodate	RbIO ₃	-4 mesh	99.9
Rubidium Iodide	RbI	-4 mesh to -20 mesh	99.9 to 99.99
Rubidium Molybdate	Rb ₂ MoO ₄	-200 mesh	99.5 to 99.9
Rubidium Niobate	RbNbO ₃	-200 mesh	99.5
Rubidium Nitrate	RbNO ₃	-10 mesh to -20 mesh	99.9 to 99.95
Rubidium Perchlorate	RbClO ₄	-4 mesh	99.9
Rubidium Phosphate	RbPO ₃	-325 mesh	99.9 to 99.95
Rubidium Selenide	Rb ₂ Se	-60 mesh to -100 mesh	99.5 to 99.995
Rubidium Sulfate	Rb ₂ SO ₄	-20 mesh	99.9
Rubidium Tantalate	RbTaO ₃	-200 mesh	99.5
Rubidium Tungstate	Rb ₂ WO ₄	-200 mesh	99.5
Rubidium Vanadate	RbVO ₃ / Rb ₄ V ₂ O ₇	-100 mesh to -325 mesh	99.5

Ru
44

RUTHENIUM Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Ruthenium	Ru	-325 mesh	99.95 to 99.99
Ruthenium Bromide	RuBr ₃	-325 mesh	99.99
Ruthenium Chloride	RuCl ₃	-100 mesh	99.9 to 99.95
Ruthenium Oxide	RuO ₂	-100 mesh to -325 mesh	99.9 to 99.99

*Purity based on metallic impurities.

Sm
62

SAMARIUM Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Samarium	Sm	-200 mesh	99.9
Samarium Boride	SmB ₆	-325 mesh	99.5
Samarium Bromide	SmBr ₃	-20 mesh	99.9
Samarium Chloride	SmCl ₃	-4 mesh to -20 mesh	99.9 to 99.99
Samarium Fluoride	SmF ₃	-60 mesh to -325 mesh	99.9 to 99.995
Samarium Iodide	SmI ₂	-20 mesh	99.9
Samarium Nitride	SmN	-60 mesh	99.9
Samarium Oxide	Sm ₂ O ₃	-325 mesh, -400 mesh	99.9 to 99.995
Samarium Sulfide	Sm ₂ S ₃	-200 mesh	99.9
Samarium Telluride	Sm ₂ Te ₃	-20 mesh	99.9
Samarium Cobalt	Sm ₂ Co ₅ / Sm ₂ Co ₇	-100 mesh to -400 mesh	99.5 to 99.95

Sc
21

SCANDIUM Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Scandium	Sc	-40 mesh to -325 mesh	99.9 to 99.95
Scandium Boride	ScB ₂	-200 mesh	99.5
Scandium Chloride	ScCl ₃	-20 mesh	99.9
Scandium Fluoride	ScF ₃	-200 mesh	99.9
Scandium Iodide	ScI ₃	-20 mesh	99.9
Scandium Oxide	Sc ₂ O ₃	-325 mesh	99.99
Scandium Sulfide	Sc ₂ S ₃	-200 mesh	99.9

Se
34

SELENIUM Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Selenium	Se	-20 mesh to -200 mesh	99.6 to 99.999
Selenium Bromide	SeBr ₄	-8 mesh	99.5
Selenium Chloride	SeCl ₄	-8 mesh	99.8
Selenium Oxide	SeO ₂	-20 mesh to -425 mesh	99.5 to 99.999

*Purity based on metallic impurities.

Si

14

SILICON Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Silicon	Si	-20 mesh to 10 µm aver. or less	98 to 99.999
Silicon Boride	SiB ₄ / SiB ₆	-325 mesh	99.5
Silicon Carbide	SiC	-325 mesh to 1 µm aver. or less	99.5 to 99.9
Silicon Dioxide	SiO ₂	-10 mesh to -400 mesh	99.5 to 99.999
Silicon Iodide	SiI ₄	-8 mesh	99.9
Silicon Monoxide	SiO	-325 mesh to -400 mesh	99.9 to 99.99
Silicon Nitride	Si ₃ N ₄ (90% alpha phase)	-325 mesh to -400 mesh	98 to 99.9

Ag

47

SILVER Base

CHEMICAL	FORMULA	DESCRIPTION	PURITY*
Silver	Ag	-20 mesh to 1 µm aver. or less	99.99 to 99.999
Silver Bromide	AgBr	-20 mesh	99.9 to 99.999
Silver Chloride	AgCl	-20 mesh to -100 mesh	99.9 to 99.999
Silver Fluoride	AgF ₂	-40 mesh	99.5
Silver Gallium Selenide	AgGaSe ₂	-325 mesh	99.999
Silver Gallium Telluride	AgGaTe ₂	-325 mesh	99.999
Silver Hexafluoroantimonate	AgSbF ₆	-6 mesh	99.9
Silver Hexafluorophosphate	AgPF ₆	-6 mesh	99.9
Silver Indium Selenide	AgInSe ₂	-325 mesh	99.999
Silver Indium Sulfide	AgInS ₂	-180 mesh	99.999
Silver Iodide	AgI	-20 mesh	99.9 to 99.999
Silver Nitrate	AgNO ₃	-10 mesh	99.9 to 99.999
Silver Oxide	Ag ₂ O	-80 mesh	99.5
Silver Sulfide	Ag ₂ S	-100 mesh	99.9 to 99.999
Silver Titanium Selenide	AgTiSe ₂	-325 mesh	99.999
Silver Titanium Telluride	AgTiTe ₂	-325 mesh	99.999

*Purity based on metallic impurities.

HARDNESS MEASUREMENT METHODS

Rockwell Hardness (HRB or HRC) is a method of measuring the hardness of materials. Hardness, in this sense, means resistance to penetration. The test gets its name from Stanley P. Rockwell who devised the test and original machines, later selling the rights. The test measures the hardness by pressing an indenter into the surface of the steel with a specific load and then measuring how far the indenter was able to penetrate.

The Vickers (HV) test was developed in England in 1925 and was formally known as the Diamond Pyramid Hardness (DPH) test. The Vickers test has two distinct force ranges, micro (10 g to 1000 g) and macro (1 kg to 100 kg), to cover all testing requirements. The indenter is the same for both ranges therefore Vickers hardness values are continuous over the total range of hardness for metals (typically HV100 to HV1000).

MATERIALS PELLETS

-
- Vacuum Deposition Grade Pellets C 03

Granules, pellets, pieces, tablets and shaped sources are available in virtually any known inorganic composition and range of purities.

PURITY

Purity is based on spectrographic values of trace metals found, i. e. 99.999% pure indicates that 0.001% (10 ppm) total of trace metals have been observed. 99.9% pure implies a total metallic impurity content of 0.1% (1000 ppm). Gases, carbon and sulfur are not included in the analysis but can possibly be determined if needed.

CERTIFICATE OF ANALYSIS AND MSDS

All items are shipped with an analysis certificate. The analysis is specific to the actual batch of material being sent and not a "typical analysis", unless specifically stated.

All dangerous materials are shipped are attached by a Material Safety Data Sheet (MSDS).

CUSTOM MANUFACTURING

The pellets sizes and purity listed are those most commonly used and called as. However Neyco can offer nearly any range of dimensions desired, with purity that needed on request.

- Backing Plates..... D 20
- Mounting of Sputtering Targets..... D 21

Most sputtering targets can be fabricated into a wide range of shapes and sizes. There are some technical limitations to the maximum size for a given single piece construction.

In such cases, a multi-segmented target can be produced with the individual segments joined together by butt or beveled joints.

OUR SPUTTERING TARGETS AT A GLANCE

- Pure metal and alloy targets (99% to 99.9999%), industrial application targets: Al, Ni/Cr, Mo, Ta, Ti, Ti/Al, W...
- Precious metal targets: Ag, Au, Ir, Pd, Pt, Rh... and alloys on request
- Hot pressed oxides and intermetallic targets without binder: Al_2O_3 , AZO, ITO, PZT, SiO_2 , ZnO...
- Circular, rectangular, Delta, ring, tube and any other shape on request
- All targets are delivered with a certificate of analysis

Neyco offers you specific composition according to your needs on request. Don't hesitate to ask us !

Manufacturing Processes

Neyco manufactures sputtering targets from a wide variety of compositions in various purity levels, allowing customers to match targets to their specific requirements and needs. We employ a number of different target manufacturing techniques to yield optimum grain size, density, hardness and composition. The specific manufacturing process depends on the properties of the target material and the end use of the target.

Manufacturing techniques used include:

- Casting
- Ceramic Sintering
- Cold and Hot Isostatic Pressing
- Extrusion
- Hot and Cold Rolling
- Inert Gas Hot-Pressing
- Plasma Spray
- Precision Machining
- Vacuum Hot-Pressing
- Vacuum Melting

Sputter Yield Guide

The following table of common target materials is useful in making comparisons between deposition processes. The first column lists the different materials.

The second column represents the etch rate data of a standard film deposition.

The sputter rate data in the third column are representative of the film deposition rate at maximum power density (i.e. about 39 W/cm², with direct cooling), a DC source and a 100 mm source-to-substrate distance. Rate will decrease linearly with power levels and depend upon the source-to-substrate distance.

A useful rule of thumb is that the film deposition rate:

1. Decreases by ~10%/cm beyond the 100 mm substrate distance.
2. Increases by ~14%/cm closer than the 100 mm substrate distance.

The fourth column represents the number of target atoms sputtered per argon ion striking the target with a kinetic energy of 500 eV (this energy is typical of an argon plasma) and at 0° incidence angle.

Magnetron design factors such as magnetic field strength – and process parameters such as gas composition and pressure – will affect these data. However, these typical data remain useful for comparison purposes.

Backing Plates

Backing plate is one of the most important components of the PVD sputtering process. Oxygen free, high conductivity (OFHC) Copper is the commonly used material. It exhibits the best electrical and thermal characteristics.

Aluminum, Molybdenum and Stainless Steel can also be used for backing plate fabrication when Copper is not appropriate. For instance, the desired sputtering target material may have a non-compatible coefficient of expansion compared to Copper's which can cause the bonded target assembly to fail irrecoverably. In such case, the use of an alternative backing plate metal is essential.

Our backing plates at a glance:

- **Used material:** OFHC, Stainless Steel, Al, Mo...
- **Manufactured to customer's specifications, or customer's drawing,**
- **Cleaning and packaging according UHV standards.**

TARGET MOUNTING IN NEYCO'S LABORATORY

Neyco offers a complete target bonding service on new or existing backing plates:

- Debonding or debrazing of your target
- Backing plate cleaning
- Target bonding: Cu/elastomeric bonding (200°C) or silver based mounting (150°C)
- Cleaning and packaging of the assembly with UHV quality

	ADVANTAGES	DISADVANTAGES
Cu based bonding	• Low price • Very good thermal and electrical conductivities • Excellent adhesion between many metals • Suitable for low melting point target materials • Suitable especially for fragile targets	• No mechanical adaptation
Ag based bonding	• All types of targets, including very fragile • Good thermal and electrical conductivities • Mechanical adjustment up to 0.4 mm	• The cost of Ag metal • Degrades over 150°C

COPPER PADS FOR SPUTTERING

NEYCO has developed sputtering pads, as a replacement of Indium, Graphite foils or other bondings, for clamped targets.

ADVANTAGES	DISADVANTAGES
• Excellent thermal and electrical conductivities • High DC and RF power • Low cost • Mechanical adjustment up to 0.5 mm	• Only for clamped targets

CHARACTERISTICS

- 100% metallic
- Initial thickness 2 mm
- Purity 99.95+%
- Vacuum packed for a direct mounting in secondary vacuum
- 200 mm wide x length on request (up to 1000 mm)
- HV compatible

Copper foam pad

GRAPHITE PADS FOR SPUTTERING

NEYCO offers you Graphite pads for sputtering.

The size from ~500 mm wide x length on request. Thickness of 0.2 mm.

ADVANTAGES	DISADVANTAGES
• Good thermal and electrical conductivities • Enabling high DC and RF power • Temperature > 250°C • Low cost	• Only for clamped targets • No mechanical adjustment

SILVER-FILLED EPOXY BONDING CEMENT

Silver-filled epoxy cement is a silver-colored thick paste containing the optimum ratio of silver powder to epoxy resin for maximum thermal and electrical conductivity and mechanical strength. The catalyst is a clear to yellow liquid. Both the epoxy cement and the catalyst should be stored in a refrigerator. This will give a shelf life of 6 months.

TYPICAL PROPERTIES OF EPOXY

Volume resistivity	Less than 0.001 Ω.cm
Pot life (after catalyst addition)	30 min at 25°C
Use temperature	-50°C to 115°C
Packaging	114 g

Precious Metals Presentation

Precious metal thin films play a role in a variety of industrial fields. We provide high-purity sputtering targets and vapour deposition materials in different shapes and sizes to suit every application.

We can supply the following precious metals:

Au 79 GOLD

As the most malleable metal, gold can be processed into fine wire or thin foil. With an extremely high infrared ray reflectivity of 98.4%, thin films of gold are used in space shuttles to protect the crew from the sun's infrared rays.

Melting point	1064.18°C
Boiling point	2800°C
Density	19.32 g/cm ³
Electrical resistance	2.2.10 ⁻⁶ Ω.cm
Thermal conductivity	319 W.m ⁻¹ .K ⁻¹
Vickers hardness in annealed state	22
Thermal expansion coefficient	14.2.10 ⁻⁶ /°C (20-100°C)
Tensile strength	108 MPa
Elongation	42%

Gold pellets

Ir 77 IRIDIUM

The increased hardness and anti-corrosion properties when alloyed with platinum and palladium have been applied to fountain pen nibs and balls for ball pens.

Melting point	2446°C
Boiling point	4527°C
Density	22.56 g/cm ³ (20°C)
Thermal conductivity	147 W.m ⁻¹ .K ⁻¹
Vickers hardness in annealed state	220
Thermal expansion coefficient	6.4.10 ⁻⁶ /°C (20-100°C)
Tensile strength	1088 MPa

Pd
46**PALLADIUM**

Palladium can absorb 350-850 times its own volume of hydrogen (at room temperature). With good permeation properties, palladium exhibits unique capabilities in high-purity hydrogen manufacturing equipment.

Melting point	1 555°C
Boiling point	3 167°C
Density	12.16 g/cm ³ (20°C)
Thermal conductivity	72 W.m ⁻¹ .K ⁻¹
Vickers hardness in annealed state	41
Thermal expansion coefficient	11.8.10 ⁻⁶ /°C (20-100°C)
Tensile strength	170 MPa
Elongation	40%

Pt
78**PLATINUM**

Platinum performs a variety of roles from vehicle exhaust gas purification catalyst to the basis of cancer-fighting agents. It is one of the precious metals with tremendous undiscovered powers.

Melting point	1 768°C
Boiling point	3 827°C
Density	21.37 g/cm ³
Thermal conductivity	72 W.m ⁻¹ .K ⁻¹
Vickers hardness in annealed state	41
Thermal expansion coefficient	8.8.10 ⁻⁶ /°C (20-100°C)
Tensile strength	123 MPa
Elongation	40%

Rh
45**RHODIUM**

Chemically stable, rhodium will dissolve gradually in aqua regia when in a powder form, but will not dissolve in acid or aqua regia when in a solid form. Rhodium plating plays a large role in searchlight reflectors and elsewhere performs a decorative function.

Melting point	1 963°C
Boiling point	3 727°C
Density	12.44 g/cm ³ (20°C)
Thermal conductivity	150 W.m ⁻¹ .K ⁻¹
Vickers hardness in annealed state	101
Thermal expansion coefficient	8.2.10 ⁻⁶ /°C (20-100°C)
Tensile strength	695 MPa
Elongation	5%

Ru
44**RUTHENIUM**

Hydrogen is formed through the breakdown of water by the sun's rays in a non-polluting hydrogen energy system that stores hydrogen as fuel. Hopes are rising that ruthenium will act as the essential catalyst to realize this future energy source.

Melting point	2 250°C
Boiling point	3 900°C
Density	12.06 g/cm ³ (20°C)
Thermal conductivity	105 W.m ⁻¹ .K ⁻¹
Thermal expansion coefficient	9.1.10 ⁻⁶ /°C (20-100°C)

Ag
47**SILVER**

Silver is used in large quantities in the form of silver nitrate as a photographic sensitive material. This metal also has the most superior reflectivity of visible light rays of any metal. For this reason, silver is used in mirrors requiring high light reflection.

Melting point	961.78°C
Boiling point	2 210°C
Density	10.50 g/cm ³
Electrical resistance	1.62.10 ⁻⁶ Ω.cm
Thermal conductivity	428 W.m ⁻¹ .K ⁻¹
Vickers hardness in annealed state	24
Thermal expansion coefficient	18.9.10 ⁻⁶ /°C (20-100°C)
Tensile strength	147 MPa
Elongation	51%

Vacuum Deposition Materials

We supply materials for the physical vapor deposition as pure elements or alloys upon customer request.

FEATURES

- Sputtering target materials without pinholes, oxides or gases.
- High-purity precious metal vapor deposition materials can be processed into granules, blocks, rods, wires and other forms.

E

APPLICATIONS

Thin film for die-bonding, LED (electrodes), quartz crystals (patterning electrodes), CD-R, DVD, gate electrodes for electronic devices, electrodes for electronic devices and oxide dielectric elements, etc.

DELIVERY FORMS

- Pellets (diameter 3 mm x 6 mm long kept in inventory for Au, Pd and Pt)
- Tube
- Rod
- Target
- Wire [evaporation wires and bonding wires (from 18 μ diameter)]
- Foil
- Ribbon
- Cone
- Others on request

Please ask for your dimensions.

All sputtering targets and evaporation materials dedicated to vacuum thin films are delivered along with a specific certificate of analysis.

Precious Metals Recycling

Precious metals are found in many shapes and forms in products that surround us. We cover all aspects, from the recovery and refining of scraps to re-manufacturing into products.

We accept for recycling all scraps containing:

- Gold, Au
- Platinum, Pt
- Palladium, Pd
- Silver, Ag
- Iridium, Ir
- Ruthenium, Ru
- Rhodium, Rh

Gold scraps

FEATURES

- Physical return and delivery as precious metal products.
- Proper equipments for any form of scraps.
- Management of scraps as a valuable based on international environmental standard.
- Crushing scraps accepted.
- Recycling and precision cleaning of vapor deposition multiple layers is also available.

We will quickly determine the value of the pure metals and transfer it to you on your weight account.

MATERIALS

Neyco provides Molybdenum, Niobium, Tantalum, Tungsten and main alloys:

- WC, WZr, WCe, WFe, WRe, WCu, WAg, WNiFe,
- Ta₂O₅, TaCu, TaW, TaNb,
- MoW, MoRe, MoTa, MoNb, TZM, MHC.

TYPE OF PRODUCTS

Powder, wire, tube, target, rod, foil, plate, sheet, crucible, liner and machined parts on request.

MANUFACTURING ON REQUEST

Neyco manufactures according to your drawings or specifications all parts you need in refractory metals:

- Standard or special Mo molyblocks
- Sample holders
- Multi-wafer platens washers
- Various Mo, Ni or Ta machined parts
- Mo, Ta, W crucible liners
- Mo and Ta screws and nuts

See Section H in this catalogue about **crucible liners**.

Molybdenum machined parts

Heated molyblock with Silicon wafer

SCREWS

Molybdenum and Tantalum screws are produced for high temperature and vacuum environments.
We provide in the same materials threaded rods, nuts and washers.

Refractory Ceramics

By definition, ceramics are non-metallic materials, inorganic, obtained by the action of high temperatures.

During firing a ceramic raw material undergoes an irreversible transformation and acquires new properties. These properties are well known : durability, wear and heat resistance.

Neyco provides a wide range of technical ceramics that will fit to all your specifications. We are able to produce a lot of ceramics parts on drawings or as per our standards dimensions (E-beam liners). Depending on your specifications, your usage constraints, work environment and the desired characteristics, we provide you with the most appropriate material for your application.

BN-TiB₂ crucible

Ceramics machined parts

Graphite & PG Parts

Graphite is a mineral of extremes. It is extremely soft, cleaves with very light pressure, and has a very low specific gravity. In contrast, it is extremely resistant to heat and nearly inert in contact with almost any other material. These extreme properties give it a wide range of uses in metallurgy and manufacturing.

Heating Elements

TUNGSTEN FILAMENTS

Neyco provides single wire and multi-strand filaments for thermal applications, such as:

- Vacuum metallization
- Vacuum lamps
- Electron emission (E-beam)
- Ion neutralization (ion-beam)
- Black Tungsten used as heating resistance (atmospheric pressure)

EXAMPLES

- Tungsten filaments with 9 strands: 0.76x3x3x1650 mm, purity = 99.95%
- Tungsten filaments with 2 or 3 strands
- Tungsten wires Ø 15 to 100 µm

PBN/PG HEATING ELEMENTS

PBN/PG resistance heating elements combine the unique electrical, chemical, and thermal properties of PBN, a dielectric material, and Pyrolytic Graphite (PG), an electrical conductor, to produce a truly advanced heating system.

These non-brittle refractory materials owe their exceptional purity to the high temperature, chemical vapor deposition (CVD) production method. The high thermal conductivity and anisotropy of both materials result in excellent thermal uniformity.

PERFORMANCE ADVANTAGES

PBN/PG “printed circuit” heaters utilize PBN as an insulating substrate and Pyrolytic Graphite as the resistive element. In non-oxidizing environments, this combination of unique materials delivers performance advantages not available in conventional thermal systems.

- Operating temperatures: 1500°C and higher
- Superior performance in ultra-high vacuum
- Chemically inert to most corrosive gases, liquids
- Unaffected by most molten metals
- Long life, dimensionally and electrically stable
- High resistance for low cost power supplies
- Mechanically durable, thermally shock resistant
- Unaffected by vibration
- Tailored thermal gradients for specific requirements
- Ultra-fast response, low thermal mass
- Power densities: 35 W/cm² and higher
- Dielectric, fully dense, ceramic surface
- Often suitable for slightly oxidizing atmospheres

APPLICATIONS

- PVD
- Ion-implant
- MOCVD
- CVD
- PLD
- PE-CVD

DESIGN VERSATILITY

We manufacture heaters as flat plates, with surface electrical connections inside the heated area or located outside the heated area on tabs. Heaters can also be made as 3-D elements on chemical vapor deposited (CVD) PBN crucibles and tubes.

PBN/PG Heaters have been made as small as 5 mm diameter, and as large as 300 mm.

Location of the contact tabs provides design flexibility for enhanced thermal uniformity. Resistance patterns can be circular or diagonal, and can have varying web width to tailor local flux. Multiple, independent zones can be incorporated for flexible thermal management.

PRE-ENGINEERED HEATER SOLUTIONS

Neyco's Pre-engineered Ceramic Heaters are demonstrated solutions with field-tested designs that offer outstanding thermal stability and performance in applications like epi wafer processing and high temperature process development. They offer the electrical, chemical and thermal properties of combining Pyrolytic Boron Nitride (PBN) and Pyrolytic Graphite (PG) in custom engineered solutions without the time and expense involved in refining and testing a new design.

These pre-engineered designs were once custom solutions. They have since been routinely manufactured to solve common challenges in demanding heating applications, allowing us to pass along a discounted price compared to custom-made heaters. We can also customize these ceramic heaters for your unique application or equipment.

Neyco and fuelcellmaterials.com are the premier source for solid oxide fuel cell materials, components, test fixtures and fabrication aides. Our technology, quality and customer support have made us a leader in the fuel cell industry. Backed by our expertise, research and industry knowledge we specialize in providing the highest quality solid oxide fuel cell and fuel processing products to our clients.

Electrolyte Powders

NANOSCALE ELECTROLYTE POWDERS

Nano grade electrolyte powders offer truly nanocrystalline materials with 5 to 10 nanometer particles. Nano grade powders offer tremendous amounts of active surface area per volume of materials, helping extend triple-phase boundaries and lower processing temperatures. We have the processing knowledge to tailor these materials for specific customer materials.

- Using processing techniques that deliver a high purity reproducible electrolyte powder.
- Designed for electrochemical applications.
- Designed as a sintering aid, catalyst support, or a component for mixed conducting anodes and cathodes to enhance catalytic activities.

PREMIUM ELECTROLYTE POWDERS

Premium grade electrolyte powders are designed to provide high performance materials with wide processing flexibility. Premium Powders provide lab researchers with the confidence that their research has a foundation in proven, industrially scaled and traceable powders, while providing developers and manufacturers with a scalable high quality powders to aid in commercialization.

- Industry-standard material formulations to provide high end performance and a baseline for materials development and optimization studies.
- Tailored for enhanced sinterability, and lower processing temperatures to provide you the widest possible processing options.
- Batch-to-batch reproducibility and traceability.
- Industry leading characterization and reporting to speed your research and development cycles.

CERAMIC GRADE CERIA POWDERS

We offer Gadolinium and Samarium doped Ceria powders in two grades. The Tape Cast grade is tailored for processes that require high slurry solids loading, such as tape or slip casting. The Mid grade is made to provide excellent sinterability at lower processing temperatures. These powders are also suitable for pellet pressing and other non-aqueous manufacturing processes.

- We have the ability to make material in larger quantities than what we currently offer.
- Custom formulations and/or physical specification changes are available.

MICRON-SUBMICRON ELECTROLYTE POWDERS

We offer a broad selection of micron to submicron electrolyte powders, including Yttrium-stabilized Zirconia (YSZ) and LSGM. YSZ is a purely ionic conductive electrolyte over a wider range of oxygen partial pressures, which finds wide applicability in SOFCs, oxygen generation systems and sensors.

- YSZ TC is our most popular grade for tape casting electrolyte material for SOFCs due to its ideal surface area and particle size distribution.
- Coarser YSZ powders are tailored for the production of high porosity electrodes with stable microstructure.
- LSGM offers high conducting properties at intermediate operating temperatures while providing stability.
- Custom formulations and/or physical specification changes are available.

Cathode Powders

CATHODE POWDERS

We offer Sr-doped Lanthanum Manganite (LSM) in both standard and custom formulations. We also offer a line of Perovskite electrode materials based on Strontium and Cobalt doped Lanthanum Ferrite (LSCF), which offer improved low-temperature performance for SOFCs. Composite cathodes are used to extend the three-phase boundary region of the electrode/electrolyte interface and enhance oxygen reduction on the cathode. This improved activity reduces overall electrode and cell resistance.

- We have the ability to make material in larger quantities upon request.
- Tailored formulations and/or physical specification changes are available.

Anode Powders

NICKEL BASED ANODE POWDERS

Our anode materials range from the conventional compositions of NiO/Yttrium-stabilized Zirconia compositions to NiO composites with Gadolinium or Samarium doped Ceria. These anode formulations are optimized to create highly catalytic active anode layers. Other powders have been tailored to provide highly conductive current collection layers that provide stable gas diffusion during operation.

- Applications range from tape casting, extrusion, or roll compaction.
- Anode powders can quickly be processed into inks for screen printing of the anode electrode.
- Optimized particle sizes to control the pore structure of the fired material creating structures that are strong with high performance.
- The use of pre-formulated anode powder mixtures saves processing time and assures batch-to-batch reproducibility.

Inks

We offer contact inks for both the anode and cathode electrodes of SOFCs. To achieve quality results it is very important to have good contact between the electrode surface and the current collector. Applying a thin layer of ink (LSM or LSCF for the cathode and Nickel for the anode) over your electrode will help to ensure high quality reproducible results.

- We have the ability to make material in larger quantities upon request.
- Custom formulations and/or physical specification changes are available.

PRECIOUS METAL INKS

We offer three different precious metal inks to assist in attaching current collector meshes to both anode and electrolyte supported cells. All precious metal inks should be used sparingly to ensure gas flow to the electrodes.

- Silver ink is best used for low temperature applications.
- Both gold and platinum work well at higher temperature testing.
- Nickel paste is an effective anode current collector.

Cells and Substrates

ELECTROLYTE SUPPORTED CELLS AND SINGLE-SIDED CELLS

The NextCell™ uses the patent-pending Hionic™ electrolyte support which is more than four times stronger than the most popular fully stabilized YSZ-8 material, with conductivity surpassing that of YSZ-8. Improved flexibility makes the cells less brittle and therefore more forgiving during operations such as testing and stack assembly.

- Electrolyte supported cells have high structural integrity and fuel utilization while offering simple sealing.
- Custom sizes and shapes are available upon request.
- Single sided cells work very well as an aid for researching electrode compositions.
- The NextCell™ uses a 150 μm (+/- 15 μm) Hionic™ electrolyte with 50 μm multi-layer electrodes.

ANODE SUPPORTED CELLS AND BI-LAYERS

Anode supported cells with the Ni-YSZ/YSZ/LSM structure are the most common starting point for intermediate temperature SOFC research and development. Thin electrolytes enhance ionic transport, especially below 800°C. Ni-YSZ anodes and LSM-based cathodes offer excellent catalytic performance and electronic transport.

- Optimal balance of membrane and ionic function using ~10 micrometer thick electrolyte.
- Small and large quantities available to meet R&D budgets.
- Cells and anode-electrolyte bilayers are offered for benchmarking, gas-contaminant performance and cathode material research.

ELECTROLYTE SUBSTRATE BUTTONS

Using proprietary fabrication methods and materials, we have developed a high strength and high performance electrolyte support. The Hionic™ substrate is more than four times stronger than conventional fully stabilized YSZ-8 electrolyte supports. This high strength allow for thin substrates to be significantly more robust during handling, mounting and processing.

- High conductivity combined with the thinness of the support minimizes the overall resistance of the Hionic™ platform, thus improving the ability to measure the properties of electrodes and cells.
- Perfect starting point for the researcher who wants to test a variety of anode and cathode materials in SOFC development.
- YSZ-8 (8 mole % Ytria) are a low cost option when low performance is acceptable.

Seal Materials

COMPRESSION SEAL SHEETS AND HIGH TEMPERATURE SEAL PASTE

We offer two different types of seals, two versions of compression seals and one sealant paste. Compression seals are great for use with planar cells both anode and electrolyte supported. The high temperature sealing paste works with both planar and tubular designs.

- Compression seals are made from both Alumina and Mica.
- Alumina Slurry can be used as an additive to the Alumina felt to increase sealing properties.
- Custom sizes or shapes are available upon request.

H

Crucible liners protect the water-cooled copper hearth in electron beam units and eliminate the risk of contamination when one material replaces another in a given pocket. They also minimize heat transfer between the evaporated material and the water-cooled crucible. They reduce time of clean up and material changes and help increase deposition rates.

Liners can be manufactured from Graphite, Molybdenum, Tantalum and most other metals as well as from Al_2O_3 , BN and other non-metals. The choice of the liners depends on the material to be evaporated.

ORDER PART NUMBERS

To determine correct model Number

* for 25 cc liners, indicate the number of pockets 4 or 6 as follow:

L4_25CC
L5_25CC

Examples: Liner 7 cc Fabmate: LCV7CCFAB

Liner 4 cc Molybdenum: LMO4CC

Liner 25 cc 4 pockets Graphite: L4C25CC

Others sizes (13 cc, 18 cc, 30 cc, 156 cc...) and materials (Intermetallic, Copper, Tantalum...) on request.

All NEYCO Graphite crucibles and liners are *Electronic Quality* - ashes < 5 ppm -

OTHER E-BEAM LINERS

Neyco supplies crucible liners for Leybold, Edwards, Satis, APT/Ferrotec, Thermionics, Varian, CHA Industries, MDC electron beam guns. All sizes and materials on request.

Evaporation Cones

Neyco supplies pre-melted evaporation cones for all electron beam guns:

- Metals, alloys, (Ni, Ni/Cr, Al, Cr, Si...)
- From 99 to 99.999%
- Supplied with certificate of analysis

Neyco supplies also reducers cone in metals (Cu, Mo, W...) to reduce the volume of the pocket and/or to be compatible with existing liners.

All sizes and materials on request.

Evaporation Source Selection Guide

This source selection guide is provided to help you determine which evaporation source type might fit your needs.

How to use the Guide:

1. Determine how much current your power supply is capable of safely producing.
2. Establish the vapor temperature of the material(s) you plan on evaporating.
3. Estimate the coating thickness you will be attempting. With the information shown in the following table, you can select which part types will best meet your needs.

As always, Neyco offers open technical support if you need further assistance in selecting the right evaporation source to make your thin film coating process a success.

Tungsten Filaments for Vacuum Metalizing

Tungsten metalizing filaments have long been the standard for thin film depositions for a wide variety of materials. We offer an extensive selection of tungsten filaments to fit most applications as well as custom fabrication to meet your specific process needs. The benefits of using tungsten metalizing filaments for your evaporation process include low cost, long life, high rates with low power, repeatability and ease of use.

Baskets

Tungsten Evaporation Baskets offer an effective method of reaching high temperatures with low current. The benefits of using tungsten baskets as an evaporation source for your deposition process include low cost, ease of use, multi-directional coatings and low power requirements. Custom fabrication, to meet your specific process needs, is available upon request.

Heat Shielded Crucible Heaters

Shielded Crucible Heaters provide uniform heating to the installed crucible and allow very high rates as well as high temperatures, up to 1800°C, to be achieved. Due to the rigid construction, heater and crucible life is extended. The thermal shields protect your components by reducing the radiant heat that your system is exposed to. Custom sizes are available on request.

Material: Ta, Tantalum

Boat Sources

Evaporation Boats are capable of depositing a wide variety materials. We offer an extensive selection of standard tungsten boats, tantalum boats and molybdenum boats as well as custom fabrication to meet your specific evaporation source needs. All of our evaporation boats are available in a variety of high purity materials and thicknesses.

Alumina Coated Evaporation Sources

Alumina coated evaporation sources have been developed to replace alumina crucibles for some specific applications. The advantages of this type of evaporation source are good heat transfer and the inertness of alumina with most metals. Also, the evaporant does not wet the alumina resulting in no resistant change of the boat when the evaporant melts. Due to the non wetting characteristics of alumina, the evaporant forms a sphere when melted resulting in a point source. This type of evaporation source will give long life compared to the non protected sources. Coated sources will require from thirty to fifty percent more power to effect an evaporation do to the difference in heat conduction. The alumina is semi-conductor grade and is applied to the boat or basket by a plasma spray technique. Temperatures over 1850°C should be avoided, and when an evaporation is effected the power should be reduced slightly to avoid over heating.

Baffled Box Sources for SiO, ZnS

The “Baffled Box” Silicon Monoxide Source, SiO source, has proven to be an extremely successful method of depositing Silicon Monoxide. Source material is positioned in the boat within separate cavities, when heated it follows an indirect path through a series of baffles and then out of the exhaust chimney. The substrate cannot see the bulk material at any time. This essentially eliminates any chance of spitting and streaming which causes pinhole type defects. Many of the sources shown are available with up, down or horizontal exhaust ports.

Chrome Plated Tungsten Rods

We offer an effective, user friendly way to evaporate Chromium. The Chrome plated Tungsten rods are used for thin films of Chromium in the electronics and optics industries. The advantage of using Chrome rods over Chrome chips are better thermal efficiency, regulation of film thickness and elimination of spitting and spalling which can cause pinhole type defects.

The rods are offered in the below configuration as standards.

NEYCO has a complete range of substrates for a wide variety of applications, including Semiconductor, Biotechnology, Nanotechnology, and MEMS. NEYCO is your one stop source for advanced materials for both R&D laboratory use and industry production.

STANDARD SINGLE CRYSTAL SUBSTRATE PARAMETERS

Substrates and wafers are manufactured by a technology, which is specially adapted to the respective material. Additionally we produce substrates and wafers customer-specific in all possible orientations, sizes and geometries and with smaller tolerance.

Orientations	(100), (111), (110) for cubic crystals (110), (001) for tetragonal crystals (0001), (1-102), (11-20), (10-10) for hexagonal crystals (110), (001) for orthorhombic crystals other orientations on request Standard: edges are oriented
Tolerance of orientation	Maximum 30' ; typical < 20' higher precision on request
Standard sizes	10x10 mm, 10x5 mm, 12.7x12.7 mm, 15x15 mm, 20x20 mm, 25x25 mm, ø 1", ø 2", ø 3" other sizes on request
Tolerance of sizes	+0/-0.05 mm
Thickness	0.5 mm, 1.0 mm (standard) other thicknesses down to 0.1 mm on request
Tolerance of thickness	+0.05/-0.05 mm
Polish	One side, two sides optical polish of lateral sides (cylinders) on request
Surface quality	Scratchfree at magnification of 50
Roughness: (at $\lambda_{\text{cutoff}} = 0.08 \text{ mm}$)	Ra: typ. 0.5 nm Rq: typ. 1.0 nm Rt: typ. 2.0 nm
Parallelity	Typ. better than 10'
Flatness	Max. 1 $\mu\text{m}/10 \text{ mm}$ (test region 98% of the wafer area)

Micro-roughness measured with Kugler Interferometermicroscope (lateral resolution: 0.64 μm , vertical resolution (theoretically): 0.01 nm).

Silicon Wafers

MATERIALS CHARACTERISTICS

Silicon wafers are cut from silicon single crystal using internal diameter diamond discs. Silicon wafers are lapped of both sides with abrasive mixture. After cutting or lapping the wafers are washed in ultrasonic washers or undergo active washing. The wafers' edges are mechanically rounded. Silicon wafers are etched in acid mixture or alkaline. Wafers surface is alkaline or acid etched according to the customer's request. Active sides of the wafers (for single side polished wafers) or both sides (for two sides polished wafers) are chemo-mechanically polished.

The mentioned parameters are dealing with our standard production. On the customer's request we are ready to discuss orders for wafers with some other parameters, for instance:

- Low radial resistivity variation (RRV) combined with the uniform distribution of dopants in the crystal (this parameter depends on shape of phase boundary and the

Etched Silicon wafers

phenomena in the boundary layer during monocrystallization process).

- Perfect crystallographic structure of material (free from swirls, with dislocations density lower than recommended by SEMI standard - 500/cm²).
- Low oxygen concentration ($O_2 < 30$ ppm).
- Tolerance of orientation better than 0.10°.
- Very good polished surface (one or both sides polished depending on technology and the type of products).

SERVICES ON SILICON WAFERS

THERMAL OXIDATION AND NITRURATION

We offer a service of thermal oxidation (by dry or wet way) on our wafers. The oxidation thickness can be from 50 nm to 5 μm . The oxidation on one side is also possible.

We also offer a service of nitriding Si_3N_4 (classical at 800°C or low stress at 835°C) on our wafers.

Thickness: from 50 nm to 5 μm .

Thermal nitriding on Si wafer

VACUUM COATINGS ON WAFER

We make special vacuum coatings on wafers (for example: precoating of Chromium or Titanium before a thin film of Gold, or any other E-beam evaporated or sputtered material).

DICING OF WAFERS

We offer the dicing of the wafers in square or rectangular parts.

For examples:

- 10 mm x 10 mm
- 5 mm x 5 mm
- 5 mm x 10 mm,...

Al₂O₃ SAPPHIRE SUBSTRATE

Sapphire (single crystal of Al₂O₃) is being used extensively as a substrate for III-V nitrides and for many other epitaxial films. Single crystal sapphire wafer plays an increasingly important role as a material for blue LED, high T_c superconductor and microwave applications, due to its high strength, high anti-corrosion, high anti-abrasion, low dielectric loss and good electrical insulation.

NEYCO provides sapphire substrates with complete orientation options including C plane, A plane, R plane and M plane, in diameter range from 1" to 4", square substrate is also available as well, size from 10 x 10 mm to 100 x 100 mm. NEYCO can offer EPI ready grade sapphire wafer for your epitaxial growth.

FEATURES

- High working temperature
- Good thermal conductivity
- Superior mechanical properties
- High anti corrosion
- Stable dielectric constant & low dielectric loss
- Excellent light transmission

APPLICATIONS

- Blue LED substrate
- Superconductor substrate
- Electronics and optoelectronics
- UV and IR optics

GaAs GALLIUM ARSENIDE SUBSTRATE

Gallium Arsenide used for lenses and beam splitters provides an alternative to ZnSe in medium and high power CW CO₂ laser systems. It is most useful in applications where toughness and durability are important. Its hardness and strength make it a good choice where dust or

abrasive particles tend to build up on or bombard the optical surfaces. When frequent cleaning by wiping is required, GaAs is excellent. The material is nonhygroscopic, safe to use in laboratory and field conditions and is chemically stable except when in contact with strong acids.

InP INDIUM PHOSPHIDE SUBSTRATE

NEYCO supplies high quality InP single crystal substrates for semiconductor industries. The wafers are cut along precise orientation and highly EPI polished.

APPLICATIONS

InP has been a focus of development since the early 1980s, and today the material is being used as a platform for a wide variety of fiber communications components, including lasers, LEDs, semiconductor optical amplifiers, modulators and photo-detectors.

InP applications for discrete active devices are widespread in communications networking, making it the natural starting place for wholesale integration of passive devices for a complete system on a chip. As a semiconductor material, InP can provide all-in-one integrated functionality that includes light generation, detection, amplification, high-speed modulation and switching, as well as passive splitting, combining and routing. The same material can be used to make high-speed modulators, switches, amplifiers and detectors, or just passive wave guides for interconnecting these diverse devices.

NaCl SODIUM CHLORIDE SUBSTRATE

Use only these crystals for fine research work requiring minimum 10 mm square uninterrupted areas.

- Formula: NaCl
- Appearance: Cubic clear (nearly transparent) crystals
- Density: 2.165 g.cm⁻³
- Solubility in water: a thin “wafer” that is 0.05” (1.27 mm) will dissolve in water at room temperature in roughly 30 seconds

GROW EPITAXIAL FILMS

These high quality research grade sodium chloride single crystal substrates offer a major advantage: the ability to grow epitaxial films on a featureless substrate.

The orientation of the film is related to the orientation of the substrate, producing areas of single crystal film.

This feature is ideal for boundary diffusion studies and applications where a single crystal thin film is required. The film is easily removed by floating it off on water or by dissolving away the underlying substrate.

TiO₂ TITANIUM OXIDE (RUTILE) SUBSTRATE

Rutile (TiO₂) single crystal is one of the most suitable materials for spectral prisms and polarizing devices such as optical isolators and beam displacers because it has a

large birefringence with a high refractive index. Compared to YVO₄, TiO₂ crystal is more stable chemically and physically.

Glass & Fused Quartz Substrates

BOROSILICATE GLASS

Borosilicate glass, known under trade names such as Pyrex® and Duran®, is widely used in chemical and engineering applications.

This glass is chemically resistant, has a low thermal expansion coefficient and can be used at relatively high temperatures. Our high quality borosilicate glass substrates are optically polished on both surfaces. The excellent

flatness and a low warp of our borosilicate wafers and the thermal coefficient of expansion close to the one of silicon, facilitate sophisticated applications in the semiconductor industry such as anodic bonding to silicon and various micro optical applications.

On request, our borosilicate glass wafers can be made with a ground SEMI standard flat or a notch.

Many types of glass are available :

Borofloat 33, D263T, pyrex, Bk7, B270, Eagle X,...

- Semiconductor applications
- Micro lithography
- Substrates for anodic bonding
- Optical substrates

ITO-COATINGS ON GLASS SUBSTRATE

Whenever an electrically conductive surface that also offers a high optical transparency is required, ITO-coating glass series are used. ITO-coating glass is achieved by sputter-coating a thin conductive layer of Indium-Tin-Oxide onto high quality glass substrates.

Because of the low electrical sheet resistances we have available, our ITO-coatings have often be used to shield electromagnetic fields while still transmitting most of the visible light.

APPLICATIONS

- Display technology
- Transparent ITO electrode
- ITO coated microscope slide
- Circuit substrate
- Micro structuring application
- Transparent EMF/EMI/EMC/RFI/HF shielding glass
- Flat antennas for mobile communication
- Conducting glass
- De-Icing applications
- Heatable ITO slide & cover slip

REFRACTIVE INDEX

We present the refractive index data for the ITO coating. It is the refractive index value used for calculating our ITO film performances. Remember that the ITO coatings made are sputtered and therefore are denser than coatings made by vacuum evaporation.

Our series of conductive transparent oxide coatings feature a SiO_2 passivation layer. This quartz barrier layer is only a few nanometers thick, and is located between the substrate and the ITO-coating. This offers an increased electrical insulation performance and minimizes possible leaching of alkali-oxides from the glass into liquid crystals. The process of coating this SiO_2 passivation layer between the ITO thin film coating and the glass substrate, is advantageous for most electronic applications and is efficiently integrated into the production process.

SPECIAL PROPERTIES

- Electrically conductive and optically transparent
- High VIS-NIR light transmission
- High quality glass substrate
- SiO_2 barrier layer
- Low roughness
- High sheet resistance homogeneity
- Uniform transmission homogeneity
- Reflecting in the infrared range

QUARTZ/FUSED SILICA SUBSTRATE

Quartz glass is an extremely versatile material used in a range of different applications. It has outstanding thermal properties, excellent optical transmission, with good electrical and corrosion performance.

There are two basic ways of making quartz / silica glass:

- By melting silica grains either by gas or electrical heating (the type of heating affects some optical properties). This material can be transparent or, for some applications, opaque.
- By synthesising the glass from chemicals.

This synthetic material, normally referred to as synthetic fused silica, has better optical properties and is somewhat more expensive than the other type.

- Typical index homogeneity: $< 8 \times 10^{-6}$
- Thermal expansion coefficient: $0.58 \times 10^{-6} / \text{K}$ (0° to 200°)
- Density: 2.201 g/cm^3

There are mainly three types of fused silica, NEGS1, NEGS2, NEGS3, they are used for different applications. Please refer to below for details.

NEGS1 is mainly used for optics operating in the UV and the visible wavelength range. It is free of bubbles and inclusions. It is equivalent to Suprasil 1&2 and Corning 7980.

NEGS2 is mainly used as mirror substrate, as it has tiny bubbles inside. It is equivalent to Homosil 1, 2&3.

NEGS3 is transparent in the UV, visible and IR spectral regions, but it has many bubbles inside. It is equivalent to Suprasil 300.

Ceramic Substrates

ALUMINA Al_2O_3 SUBSTRATE (MICROPOLISHED)

Pure alumina ceramic due to their high insulation resistance at elevated temperatures, high dielectric strength, low dielectric loss tangent at high frequencies is one of the best dielectric materials available for use in applications requiring electrical insulation.

The mechanical strength of pure alumina ceramics may be extremely high if properly controlled by the size and homogeneity of the constituent crystallites. It is recommended to use ceramics in compression because

compressive strength is nearly 10 times the one of the flexural strength. This may be achieved through design or by the establishment of operating conditions.

Thermal and chemical properties of pure alumina ceramics are always of great interest. Thermal conductivity is nearly equivalent to stainless steel. Pure alumina ceramics is inert to oxidation, not corroded by chemical agents and not subjected to radiation damage.

APPLICATIONS

- Mechanical seal faces
- Nozzles for abrasives spraying corrosive reagents
- High pressure liquid media
- Laboratory apparatus components
- Metalized parts of high vacuum and high-voltage feed-through, and many other applications

Glassy Carbon Substrates

Glassy carbon, also called vitreous carbon, is an advanced material of pure carbon combining glassy and ceramic properties with those of graphite's one. Unlike graphite,

glassy carbon has a fullerene-related microstructure. This leads to a great variety of unique material properties.

SPECIAL PROPERTIES

- High temperature resistance in inert gas or vacuum up to 3000°C
- High purity
- Extreme corrosion resistance
- Impermeability to gas and liquids, no open porosity
- No wetting by melts
- High hardness and strength
- Low density
- High surface quality, no particle generation
- Low thermal expansion
- Extreme resistance to thermal shock
- Isotropy of physical and chemical properties
- Good electrical conductivity
- Biocompatibility

HOPG & Mica Substrates

HIGHLY ORDERED PYROLYTIC GRAPHITE HOPG

HOPG, is a relatively new form of high purity carbon and provides microscopists with a renewable and smooth surface. Unlike mica, HOPG is completely non-polar, and for samples where elemental analysis will also be done, it provides a background with only carbon in the elemental signature. The extreme smoothness of HOPG gives results in a featureless background, except at atomic levels of resolution.

The structure is strictly columnar, which means, the columns run vertically within the flat slab of the material. The grain boundaries can be seen on the lateral surfaces. The mosaic spread is the angle of deviation of the grain's boundary from this perpendicular axis (of the columnar structure).

USE AT ELEVATED TEMPERATURES

As more and more applications are found for HOPG in research and technology, more and more applications are requiring good high temperature characteristics. We can report the following information which should be useful for those contemplating such usage:

- Air: 500°C (Starts to burn)
- Vacuum at 10^{-1} mbar range 2500°C
- Inert atmosphere (N_2 , Ar, He): 3500°C

DENSITY OF HOPG

The density for all three grades (ZYA, ZYB, and ZYH) is 2.27 g.cm^{-3} .

GRADE ZYA

Comparable to the very best "calibration grade" HOPG and exhibiting a $0.4^\circ \pm 0.1^\circ$. This is the most highly ordered, lateral grain size is typically up to about 3 mm but can be as large as 10 mm, and is used primarily for instrument calibration purposes or for research experiments where for some reason, the very ultimate in HOPG order is needed.

GRADE ZYB

This grade exhibits a mosaic angle as small as $0.8^\circ \pm 0.2^\circ$. This grade is slightly less highly ordered than ZYA but is acceptable for most users. The lateral grain size can be up to 0.5 mm but can be as large as 1 mm.

GRADE ZYH

Exhibits a mosaic angle as small as $3.5^\circ \pm 1.5^\circ$. This grade is much less highly ordered and has a grain size not larger than the range of 30-40 nm.

HOPG is available in :

- Squares & rectangles
- Discs

MICA SHEETS AND SUBSTRATES

APPLICATIONS

For AFM studies, and for those making either carbon films or doing thin film coating research and wanting a higher quality mica as defined as having fewer “steps” on a freshly cleaved surface, we would recommend grade V-4. This grade is also great for use with AFM where a polar substrate is desired or where polarity of the substrate does not matter.

For AFM calibration studies or perhaps the ultimate substrate for carbon film production, we offer the grade V-1. Mica can also be used as a substrate for binding cells to be characterized by TEM.

Mica are available in :

- Squares & rectangles
- Discs

- Chemical Formula: $K_2OAl_2O_3SiO_2$
- Appearance: Semi clear to gray translucent sheets, strips, and discs
- Specific gravity: 2.7 g.cm^{-3}
- Hardness on Mohs scale of hardness: 2 - 2.25
- Grade V-1 Muscovite: Highest possible quality
- Grade V-4 Muscovite: Premium research quality
- Grade V-5 Muscovite: Research quality

Thermo Patch - Vacuum Environment

This product is label type temperature indicator able to use under primary vacuum environment. Temperature monitoring can be done without wiring and electric powers supply just by applying this label on where it is necessary. Color-changing area changes its color from light yellow to black when response temperature is exceeded.

This product was designed to minimize precision error under vacuum condition.

Moreover, low out gassing material is used to reduce out gassing from label.

Metallization Aluminum Wires

These pure Aluminum wires are used for metallization process in vacuum-coating equipments.

SPECIFICATIONS

Purity grades: from 99.5% to 99.99%

Wire diameters: from 1.00 mm to 3.00 mm

APPLICATIONS

- Flexible packagings
- Solar films
- Capacitors
- Holograms
- Head lights
- Reflective coatings (various applications)

Each spool is delivered with a specific certificate of analysis, and individually identified which guarantees the total traceability of the material.

Bonding Wires

Bonding wires are used for a wide range of products, such as integrated circuits (ICs and LSIs) and transistors. It connects Aluminum electrode and Lead electrode on semiconductor IC chip.

Our bonding wires are delivered with a specific certificate of analysis.

TANAKA ALUMINUM BONDING WIRES

Al BONDING WIRE

Features

- Excellent corrosion resistance under PCT (TANW type)
- Excellent bondability
- Hard, Soft-1, and Soft-2 are available according to applications.

Al ALLOY BONDING WIRE

Features

- 99% purity Al alloy
- Finer grain size & higher tensile strength
- Excellent heat resistance
- Excellent thermal fatigue resistance

Dimensions

Diameter from 100 µm to 500 µm.

TANAKA GOLD BONDING WIRES

Au BONDING WIRE

Features

- Stable stitch bond (1st and 2nd bondings)
- Excellent performance in thermal stress environment
- Fine pitch bonding
- Excellent bonding
- Good for fine pitch small pads
- High strength with less wire sweep
- Less neck damage, good for fine pitch pads
- Super low loops (long & short)

Dimensions

Diameter from 15 $\pm$ 1 μ m to 38 $\pm$ 1 μ m.

Gold bonding wire spool

Au ALLOY BONDING WIRE

Features

- Higher bond reliability on halogen compound (GPG series)
- Good squashed ball shape (GPG -2)
- Continuous wire bond stability (GPG-3)

Dimensions

Diameter from 15 μ m to 30 μ m.

Au BUMPING WIRE

Features

- Small deviation of ball neck height after bumping
- Steady bump shape
- No bond pad damage after bonding (LGBE)
- Low deterioration of shear strength in aging test at 200°C (GBC)

Dimensions

Diameter from 15 μ m to 38 μ m.

TANAKA SILVER ALLOY BONDING WIRE

Ag ALLOY BONDING WIRE

Features

- Reduce material cost with good bondability
- Lower material costs than Gold wire and higher bondability than Copper wire
- High reflectivity in low wavelength range
- Low resistivity (SEB.SEC type)
- Softer FAB (SEC type)

Dimensions

Diameter from 15 μm to 30 μm .

Silver alloy bonding wire spool

TANAKA COPPER BONDING WIRES

Cu BONDING WIRE

Features

- Enables a reduction in costs with a lower material cost than gold bonding wires
- Excellent reliability
- Wide bonding window
- High and stable bondability

Dimensions

Diameter from 15 ± 1 μm to 500 ± 10 μm .

Cu ALLOY BONDING WIRE

Features

- Higher bond reliability
- Wides bonding window
- Lower resistivity
- Softer FAB

Dimensions

Diameter from 18 μm to 25 μm .

Conductive Paints

CONDUCTIVE CARBON PAINT

The micrographite particles are uniformly dispersed in isopropanol and air-dry rapidly at room temperature. Although there are some low level impurities, these are generally not seen by most energy dispersive ray spectroscopy (EDS) systems. The Carbon Paint is very easy to use with our exclusive brush-in-cap applicator. The Carbon Paint is formulated with a small amount of a special polymer to give extra adhesive characteristics to the paint. If the Carbon Paint should dry out, it can be resuspended with our Carbon Paint Thinner. The Carbon Paint products has an essentially infinite shelf life and we will guarantee the product's integrity in the unopened state as long as needed for the our customer's use date.

Sheet resistance: 1.2 k Ω /sq (25 μ m film thickness).

CONDUCTIVE SILVER PAINT

The Silver Paint is formulated with a small amount of a special polymer to give the product extra adhesive characteristics, but without degrading the otherwise outstanding out-gassing characteristics.

Sheet resistance: 12 mΩ/sq (25 μm film thickness).

CONDUCTIVE PLATINUM PAINT

The Platinum Paint has been formulated for those applications requiring high temperature performance as well as chemical inertness. When applied on a surface, the thin layer, after firing, takes on the bulk properties of Platinum.

Sheet resistance: 5-10 Ω/sq (25 μm film thickness).

Conductive Adhesives

CONDUCTIVE DOUBLE SIDED ADHESIVE SHEETS

These double sided adhesive, electrically conductive sheets were specially developed for attaching samples to be examined by SEM and/or EDS. Use Silver, for its higher conductivity, for straight SEM work. Use Carbon for EDS work where it is important to eliminate the X-rays from the substrate.

Both Silver and Carbon adhesives have these advantages:

- Enable the mounting of samples without contamination from either Silver Paint or Carbon Paint.
- Enable the mounting of highly porous or other absorbent samples without distortion caused by liquid being pulled into the sample.
- Provide good conductivity.
- These conductive adhesives are both available in sheet form (Ag and C) and roll form (C only). Additionally, the sheets are available as "large sheets" for applications outside the general SEM area.
- UHV "compatible" to the extent that samples can be mounted for examination by Field Emission SEM, FE-SEM and XPS.

ADHESIVE TAPES

3M® COPPER CONDUCTING TAPES

These fine tapes consist of a specially developed conductive adhesive, applied to high purity, thin Copper foil for fastening samples of varying shapes and sizes to SEM mounts.

These tapes are available in two forms, single sided adhesive and double sided adhesive and in addition, are also available in a nice variety of different widths for different size SEM mounts.

CONDUCTIVE DOUBLE SIDED CARBON ADHESIVE TAPE

These double sided adhesive, electrically conductive tapes were specially developed to attach samples to be examined by SEM and/or EDS. A conductive Carbon based product is recommended for EDS work where it is important to eliminate the rays coming into the detector from the substrate.

ADHESIVE DISCS AND TABS

DIE-CUT CARBON CONDUCTIVE DOUBLE SIDED ADHESIVE DISCS

The double sided adhesive Carbon filled conductive discs combine both high purity and an almost coverglass smoothness to the sticky surface. In addition, the die-cut discs bring a high level of convenience to the SEM user who can order discs of the precise size needed for their respective SEM mounts. Furthermore, one will never see a static charge on the discs which makes for easy mounting of dry powders.

Double sided adhesive Carbon discs,

DIE-CUT NONCONDUCTIVE DOUBLE SIDED ADHESIVE DISCS

These are specially made double sided adhesive tabs, made from a material ideally suited for the mounting of samples for AFM (atomic force microscopy) and certain specialized SEM studies where a nonconductive substrate is desired.

PDMS

Polymethylsiloxane (PDMS) is the most widely used silicon-based organic polymer and is particularly known for its unusual rheological (or flow) properties. It's optically clear, inert, and non-flammable.

PDMS is commonly used as a stamp resin in the procedure of soft lithography making it one of the most common materials used for flow delivery in microfluidics chips.

SOME APPLICATIONS

- Power supplies
- Connectors
- Sensors
- Industrial controls
- Transformers
- Amplifiers
- High voltage resistor packs
- Relays
- Adhesive/Encapsulant for solar cells
- Adhesive handling beam lead integrated circuits during processing
- LED lighting encapsulation

SYLGARD® 184

Sylgard® 184 is a Dow Corning silicone encapsulant, mainly used in electronic applications.

PDMS* provides unparalleled protection for electronic modules and devices ranging from relatively simple to highly complex architectures and geometries. Silicones work as durable dielectric insulation, as barriers against environmental contaminants, and as stress-relieving shock and vibration absorbers over a wide temperature and humidity range.

In addition to sustaining their physical and electrical properties over a broad range of operating conditions, silicones are resistant to ozone and ultraviolet degradation and have good chemical stability.

*Polymethylsiloxane

Sylgard®184

DESCRIPTION & FEATURES

Sylgard® 184 is supplied as two-part liquid component:

- Mix Ratio (by weight or volume): 10:1
- Components (as supplied): Base/Curing agent
- Transparent encapsulant with good flame resistance
- Flowable
- Room temperature or heat cure
- High tensile strength

When liquid components are thoroughly mixed, the mixture cures to a flexible elastomer, which is suited for the protection of electrical/electronic applications. Sylgard 184 cures without exotherm at a constant rate regardless of sectional thickness or degree of confinement. It requires no post cure and can be placed in service immediately following the completion of the cure schedule with an operating temperature range of -45 to 200°C.

TYPICAL PROPERTIES

RTV615

RTV615, is a Momentive silicone rubber compounds used for protection of electronic components and assemblies against shock, vibration, moisture, ozone, dust, chemicals, and other environmental hazards by potting or encapsulation of the components and assemblies.

DESCRIPTION & FEATURES

RTV615 is supplied as two-part liquid components kits with curing agent in matched kits which are designed for use at a convenient 10:1 ratio by weight. This compound is clear and colorless with a low viscosity.

- Mix Ratio: 10:1
- Low viscosity
- Excellent electrical insulation and shock resistance
- Cure rate can be accelerated by heat
- Chemical composition contains no solvents for ease of use on production lines
- Reversion resistance and hydrolytic stability permit use in high humidity environments at elevated temperatures
- Clarity permits visual inspection for easy identification and repair of encapsulated parts

The operating temperature range is -60°C to 204°C and to achieve optimum properties an elevated temperature cure or a cure time of 7 days at room temperature is required.

This silicone rubber compound requires a primer to bond to non-silicone surfaces.

The optical clarity of these silicone rubber compounds suggests evaluation for applications such as potting solar cells for maximum light transmission and electronic assemblies where component identification is necessary or desirable.

TYPICAL PROPERTIES

QSIL216

Qsil216 is an ACC silicone encapsulant designed for electronic potting and encapsulation applications. It offers good protection against chemicals, environmental contamination, mechanical shock, vibration and impact damage. It can be employed in areas where low flammability is a prerequisite.

The cured elastomer can be repaired.

The component parts have relatively low viscosities and are readily mixed either by hand or machine.

DESCRIPTION & FEATURES

Qsil216 is supplied as two-part liquid.

- Mix Ratio: 10:1
- Non yellowing under UV light
- Optically clear
- Low Viscosity
- Wide temperature range

Polyimide Silicone Tape

KAPT6338 is a polyimide film coated with a silicone adhesive. It is suitable for secondary vacuum applications (down to 10^{-7} mbar).

APPLICATIONS

KAPT6338 is an all purpose high temperature resisting tape. It is also used as a mask in the wave solder and reflow process. KAPT6338 provides a clean and safe removal after processing.

Polyester film is the most frequently used material for masking during the thin film coating and paint spraying processes. Polyimide film can be used where a high temperature mask is called for.

NOTE 1: Non adhesive and metallized tapes are also available upon request.

NOTE 2 : Total thickness of 65 μm enables the use of this tape as viewport protection by applying directly the tape on windows in secondary vacuum. The transparency stays good enough for observation and this makes an easy and cost effective protection.

High Precision Tweezers

We offer over 150 tweezers including Dumont® products. They are all hand made, to produce ultra-high precision instruments of superior quality and durability. Each tweezer comes individually packaged in its own plastic storage and carrying box.

MIRACLE TIP® TWEEZERS

These ultra-fine high precision tips are fabricated from a 100% Anti-magnetic Super Alloy so unique that the tips can be restraightened if they become misaligned. More corrosion resistant (tips) than anti-magnetic stainless steel, but less resistant than Gold Plated tweezers.

Available in styles #3, 3C, 4, 5.

PTFE COATED TWEEZERS

The PTFE reduces the rate of heat flow from the fingers to the tips during critical cryo work and dramatically reduces the corrosive action of acids and bases on tweezers tips such as for use with HF. The PTFE coating also tends to give at least some protection of the metal. The tweezer itself is fabricated from the highest quality stainless steel.

Available in styles #3, 3C, 4, N4, 5, N5, 5a, 7.

“BIOLOGY TIP” TWEEZERS

For the most exacting of work, where the very ultimate in sharpness is needed, and the most precision of high precision points are required.

Available in the most often asked for pattern, style #5.

ANTI-MAGNETIC STAINLESS STEEL TWEEZERS

Sharp, high precision tips make these excellent, all-purpose tweezers, especially for picking up TEM grids. Crafted from high quality, anti-magnetic stainless steel.

Available in styles #00, 0, 2, 3, 3C, 4, N4, 5, N5, 5a, N5a, 7, 7a, N7, 8.

STAINLESS STEEL (INOX) TWEEZERS

Hardest tips, but the trade off is magnetic nature and least corrosion resistance. Not recommended for autoclaving.

Available in styles #0.5, 1, 3, 5, 7a, NOC.

DUMONT® “DUMOSTAR” TWEEZERS

Dumont® “Dumostar” is a high technology alloy that has very good resistance to corrosion and is superior to that of the best stainless steel. Dumostar tweezer tips are insensitive to fatigue and never lose their elasticity. Some styles are available in a polished and/or matte finish.

DUMONT® “BIOLOGY TIP” TWEEZERS

For the most exacting of work from Dumont®.

Available in styles #3, 3C, 4, N4, 5, N5, 5a, N5a 6, 7, N7, 55.

DUMONT DUMOXEL™ ANTI-MAGNETIC STAINLESS STEEL TWEEZERS

Sharp, high precision tips, entire tweezer made from anti-magnetic stainless steel.

Available in styles #00, 2, 3, 3C, 4, 6, 7, 7A, 55, NOC.

DUMONT® STAINLESS STEEL TWEEZERS

From the Dumont® “Inox” line of high precision tip products. Not recommended for routine TEM use because of the magnetic nature of the metal being used.

Available in styles #00, 0, 1, 3, 3C, 4, N4, 5, N5, 6, 7, N7, 8, 55, NOC.

ANTICAPILLARY TWEEZERS

The innovative design of these tweezers prevents water “creep” and accidental washing away of samples. These tweezers in essence stop capillary action dead in its tracks. A convenient tweezer for handling all TEM grids, the straight point can be slipped beneath the grid and the bent point will grab it without drawing water.

MEMBRANE FILTER TWEEZERS

Ideal for asbestos sample preparation. Rounded "pads" with electropolished finish won't damage delicate membrane filters: plus, they allow the grasping of the very edge of a filter so as not to disturb the active sample area.

Grids for SEM & TEM

REGULAR MESH GRIDS FOR TEM

All grids are 3.05 mm diameter, but the thickness varies with mesh size. We offer in this grid selection, thirteen different types, ranging from 50 lines/inch (e.g. 50 mesh) to 600 lines/inch (600 mesh). The lower the mesh repeat, the thinner the bar width is, in order to give the grid the desired dimensional rigidity. In other words, the 50 mesh grids are thicker than the 200 mesh grids.

Mesh sizes followed by "TT" indicate thin/thick bar matrix with an asymmetric center mark.

REGULAR GRIDS - MICRON TYPE

GRIDS WITH μ CENTER MARK

- Featuring asymmetric μ center mark for relocating and orienting grid squares when examining specimens.
- Available in square and non-square mesh styles, in both Copper and Nickel.
- Grids are 3.05 mm diameter unless otherwise noted.
Some patterns available 2.3 mm diameter as well.

Available in: Copper, Nickel.

Packaging: 100 grids/vial.

APERTURE GRIDS

- Allows the microscopist to see a complete sections without grid bar interruption
- Smooth edges
- Excellent dull/shiny side discrimination
- Hole diameter varies from 50 µm to 2000 µm

The thickness of a particular grid pattern depends on the size of the hole, the larger the hole, the thicker the grid, in order to give the grid better dimensional stability and stiffness. The thickness varies from 25 µm ± 3 µm for the smallest hole to 50 µm ± 5 µm for the thickest.

Available in: Copper, Nickel, Gold, Copper/Palladium, Gold plated Copper and Gold plated Nickel.

Packaging: 100 grids/vial.

QUANTIFOIL® CARBON COATED GRIDS: SPECIAL HOLEY CARBON FILMED GRIDS

Quantifoil is a perforated support foil with a precisely pre-defined hole size, shape, and arrangement. The use of these support foils as “support films” on TEM grids offers a number of advantages not only for conventional transmission electron microscopy (TEM), but also for low-energy point source (LEEPS) microscopy when compared with conventional holey Carbon support films.

SILICONE NITRIDE MEMBRANE WINDOWS FOR TEM AND X-RAY MICROSCOPY

SQUARE WINDOWS: SILICON NITRIDE MEMBRANE WINDOW GRIDS FOR TEM

These unique membranes of Silicon Nitride (Si_3N_4) were made using an electronic grade Silicon wafers with a thin film of Si_3N_4 deposited to the desired thickness.

- For SEM applications, the background is relatively structureless and featureless (remember, nothing is completely structureless or featureless).
- For X-ray microscopy there is really no other way for mounting many of the samples one would want to analyze.
- For SEM BSE imaging, cells can be grown directly onto the nitride windows and the volume sealed with a "blank" without membrane for a perfect UHV compatible environmental chamber.

Packaging: packs of 10 (except for 50 μm : 100).

Tripod® Polisher for Sample Preparation

TRIPOD POLISHER

The Tripod Polisher is designed for preparing cross-sections of materials for both SEM and TEM. It is extensively used for preparing unencapsulated IC cross-sections for SEM and has the added capability of preparing the same sample for TEM. Similar techniques are used in preparing samples from virtually any material for both SEM and TEM and the Tripod Polisher has been successfully used to minimize and even eliminate ion milling of TEM samples. A wide range of accessories for the Tripod Polisher is available as well.

The Tripod Lab Starter Kit consists of the following items:

- Diamond Lapping Film; plain backed, 20.3 cm diameter (1 each of the following sizes: 30, 15, 6, 3, 1, 0.5 µm)
- Multitex™ polishing cloth, 20.3 cm diameter
- Glass Plate, 20.3 cm diameter, 6.3 mm thick
- Colloidal Silica, 0.05 µm particle size, 473 ml
- Mounting wax, QuickStart™ 135 crystal clear acetone soluble wax
- Slotted TEM grids, Cu, hole size: 2 x 1 mm
- Sample cleaner, TriClean® 590
- Petri dish, 10 cm diameter
- Filter, Qualitative, 9 cm diameter. One box of 100 packs is supplied. Used for bottom of petri dishes
- Tweezer set includes one pair of tongs and one self-closing high precision tweezers
- Scotch pad abrasive added to one side

Crystalbond™

Crystalbond™, mounting adhesives are ideal materials for temporarily mounting objects that require dicing, polishing, and other machining processes. These adhesives exhibit high bond strength and adhere readily to metals, glass and ceramics.

TYPICAL APPLICATIONS

- Machining advanced ceramics
- Lapping and polishing optical components
- Dicing ceramic substrates and semiconductor wafers
- Dicing ferrites, glasses and piezoelectrics
- Dicing metal and optical single crystals
- Mounting cross-sections for electron microscopy
- Back filling components for temporary mechanical support

Cargille Refractive Index Fluids

The standard group of Cargille Refractive Index Liquids consists of a total of 220 RI liquids divided into six different RI series in the range from 1.300 to 1.800. The Certified Series cover the range of the most minerals, most chemicals, and practically all biological materials.

PRODUCT	RI RANGE	NO. OF RI. LIQUIDS
Series AAA	1.300 to 1.395	20
Series AA	1.400 to 1.458	30
Series A	1.460 to 1.640	91
Series B	1.642 to 1.700	30
Series M	1.705 to 1.800	20
Series E (High Dispersion)	1.500 to 1.640	29

Packaging: 7 ml and 30 ml

Supplied with certificate statement.

Plasma Matrix Series (2 gas entries)

Table Top RF plasma reactor system series for most of the Cleaning/Etching process in R/D or small Industrial pilot production (from 2.5 to 40 litres SS 304 vacuum chambers)

The Plasma Matrix & Super Plasma Matrix table top plasma reactors are designed to fulfil most of the R/D and industrial application of plasma cleaning, etching and surface activation where the initial machine investment has to be kept very low.

The easy and friendly use (through a LCD touch screen display) of the tool software together with the optimized design of the SS vacuum chamber of the Matrix series, put them on the top level of what offered by the today market

The Matrix plasma reactors series includes all the functions needed to keep the plasma process stable and repeatable as required by different R/D and industrial applications.

APPLICATIONS:

- Plasma activation
- Plasma etching
- Low temperature Plasma ashing
- SEM and TEM sample preparation
- Fine cleaning of high precision mechanical parts
- Textile surface treatments
- Microfluidics component treatment
- Ophtalmic (contact lens wettability)
- Plastic treatment before printing or painting processes
- Sterilization of medical equipments
- Dental implant cleaning treatment

Two versions of the Plasma Matrix are currently available:

- Plasma Matrix Plus with 2.5 litre SS 304 vacuum process chamber, two gas inlets and manual inductive matching network with up to 200 Watt RF 13.56 MHz generator,
- Super Plasma matrix with 40 litre SS vacuum process chamber, two gas inlets and a full capacitive auto matching network with up to 300 Watt RF 13.56 MHz generator.

Small Tools

DIAMOND SCRIBES

The sharp diamond tip retracts with a push on the top button. The pen-style design is manufactured to produce a wobble free "fit" between the outer barrel and the refill holding the diamond. Use for preparing and marking samples to be examined by SEM and just plain ordinary glass slides and photographic plates and also for scribing and trimming silicon, ceramics and other hard materials.

The high-precision "feel" has made the diamond scribes very popular for high volume and production work of all kinds.

The standard product comes with a diamond 0.9 mm (0.035") to 1.0 mm (0.040") diameter, with an exposed angle of 90-100 degrees. The radius of curvature at the tip is on the order of 25.4 μm (0.001") to 50.8 μm (0.002"). The Diamond Scribe products are all made from natural diamond and as nature has never made two diamonds exactly the same, there will be some variation from one diamond to another but we keep such variations within reasonably tight specifications.

The Diamond Scribe Refill has been designed to use with the Diamond Scribe. The refill consists of a diamond cutting point mounted in a tube having the appearance of a ball point pen refill. The tube is 105 mm long by 3 mm in diameter.

Magnetrons

CIRCULAR MAGNETRONS

Our circular magnetrons have rapidly become recognized as the new standard of the sputtering industry. In addition to their advanced features such as profiled magnets, turbulent water flow, and solid stainless steel construction, they offer other performance efficiencies as well.

VERSATILE, COMPACT DESIGN

Their ultra-compact design makes them ideal for virtually any new or retrofit application – including the most complex multiple-cathode deposition clusters or the smallest vacuum chambers. And they can easily be configured for either internal or external mounts.

TOTAL POWER COMPATIBILITY

Their low-impedance heads provide RF, DC, mid-frequency DC, pulsed DC, and microwave power compatibility.

STANDARD FITTINGS

We use ISO NW standard fittings, as well as ConFlat® metal seal flanges. All utilities are maintained at atmosphere, and are accessed through standard O-ring compression fittings for ease of installation in any vacuum system.

FULL RANGE OF SIZES

Our circular magnetron sources are available in 1", 2", 3", 4", 5", 6", 8", 10", 12", and 16" target sizes.

QUICK, EASY TARGET CHANGE

The patented threaded clamp and anode shield allow you to change targets (sizes 1" to 6") quickly and easily without specialized tools, and their built-in adjustability lets you fit targets of varying thickness without resorting to spacing devices. Standard targets clamping also available.

LOWER PRESSURE, HIGHER POWER

Our Magnetrons can operate at extremely low pressure – down to the 10^{-4} Torr range – and our directly cooled designs can deliver power densities up to 39 W/cm².

HIGHER RATES AND PERFORMANCE

This means our magnetrons can coat a greater area for their cathode size than other magnetrons. So you can maximize both your coating zone and your target utilization without the kind of trade-off in rate that other magnetrons force you to make.

RECOMMENDED POWER PER TARGET SIZE

	DC	RF
1"	500 W	200 W
2"	1 kW	300 W
3"	1 kW	300 W
4"	2 kW	600 W

GREATER TARGET UTILIZATION

Yet these same advanced magnetrons can give you target utilization up to 50%.

GREATER UNIFORMITY

And, thanks to the patented profiled magnets, our magnetrons also deliver much greater uniformity of deposition – routinely in the ± 3 to 5% range.

OPTIONS

- Manual or pneumatic shutter
- Right angle
- $\pm 45^\circ$ tilt
- Balanced, unbalanced
- Gas injection
- Cheminey
- High strength magnet array
- In-situ variable magnetic field

CYLINDRICAL MAGNETRONS

We have developed a rotating cylindrical magnetron assembly that is compact, economical, and lightweight. By utilizing the patented technology we provide low flux deposition profile, +85% target utilization, and power savings up to 20% compared to conventional cylindrical magnetrons.

Customized for Flat Panel Display, Web Coating and Solar Cell applications.

Complete assemblies are available from 3" - 6" (76.2 mm - 152.4 mm) in diameter and up to 4 m in length.

Other features include:

- High Magnetic Field provides a low operating voltage for reduced power requirements.
- An optimized electrical transfer design to deliver high power while avoiding arcing as well as reduced brush wear and debris.
- A KF quick connect water-to-vacuum seal for quick target changes, shorter down times and increased production.
- A universal and cost effective magnet design with customized turnarounds.

Lightweight, easily-serviced product with off-the-shelf components for low-cost, long-term investment and reliability.

"THROUGH THE WALL" STRAIGHT-THRU CYLINDRICAL MAGNETRON SOLUTIONS

RECTANGULAR MAGNETRONS

As more and more industries discover the speed, controllability, and bottom-line benefits of magnetron sputtering, production professionals are reaching out for ways to apply these advantages to larger, faster manufacturing processes.

BROADER SOLUTIONS

For many, particularly those who have to coat broad physical substrates or achieve extremely high throughput, rectangular magnetrons offer the perfect solution.

GROWING APPLICATIONS

That's why the use of rectangular magnetrons is growing so rapidly in industries such as:

- Aerospace
- Architectural glass
- Authentication
- Automotive
- Decorative coating
- Defense
- Flat panel displays
- Magnetic storage media
- Medical/Dental
- Optical
- Packaging
- Semiconductors/Microelectronics
- Solar
- Wear-resistant coating

Power Supplies

DC POWER SUPPLIES DC 05 - DC 30 FOR SPUTTERING APPLICATIONS

The compact power supplies were developed for small magnetrons in production plants and laboratories. Easy and safe operation make these power supplies very flexible for many processes. The arc-handling adjusts automatically to different process parameters, so that programming is not necessary. The units are designed for mounting in 19" racks.

The DC Power supplies DC 05 - DC 30 are **CE Compliant**.

RF 200 300 750 FAMILY ACTIVE FRONT PANEL FOR SPUTTERING APPLICATIONS

NEYCO introduce a new family of low-medium power RF generators intended to satisfy the needs of laboratory grade and small low pressure industrial plasma systems.

These generators are **CE Compliant**.

Model **RF200-300-750.AFP** 200, 300 and 750 W, Active Front Panel, direct tuner interface, optional external module.

The low-medium power AFP (Active Front Panel) series is a ½ rack mounted generator with direct tuner control and AFP with LCD touch screen display, friendly user interface software and RS 232-Profibus interfaces up on request. The unit can be configured also to drive 2 Auto matching networks as option.

Common SPECIFICATIONS of **Active Front Panel generator** families:

- The analog control module and the RF module are common to all families.
- The RF mosfet type, output tuning elements and DC switching power supply.
- The BDS RF series is a class E circuit with 85-90% typical efficiency.
- The output power is modulated by means of a PWM circuit acting on the DC bus.

SPECIFICATIONS FOR ACTIVE FRONT PANEL VERSION

Dimensions	132.5 x 269 x 410 mm
Weight	About 5 kg
Power requirements	World wide mains supply 120 to 240 VAC 50-60 Hz with PFC
Operating frequency	13.56 MHz $\pm$ 0.005 % quartz controlled
Output power on 50 Ohm load	From 4 to max 750 W (different FS versions)
Maximum reflected power	20 %
Harmonic content	-40 dB below fundamental
Power detector	Forward and reverse power, linear scale 3% accuracy
Protection circuits	Excess reverse power, over temperature PA (Power Amplifier) overvoltage, PA over current
RF Output connector	N, female
User Interface	User friendly LCD touch screen display
User port connector	D-Type 9 pin, female Interlock function and remote RF ON
Interfaces	RS 232 - Profibus for remote control (up on request)
Tuner control	Full interfacing capability with matching units series BDS-AMXXX
Matching network port	D-Type 25 pin female
Operating temperature	From 10 to 40°C, No condensation or icing
Cooling	Forced air with 80mm fan
Note	Optional: driver module for N° 2 auto matching networks

BAA 600 AUTO MATCHING UNIT FOR RF SPUTTERING

NEYCO is introducing a new family of automatic matching network units operating at the standard ISM frequency of 13.56 MHz intended for industrial and laboratory use.

The BAA 600 Auto is **CE Compliant**.

Typical applications include sputtering process, PECVD deposition, plasma activation, dielectric heating, laser excitation and more. The two standard configurations are L type network that best fits low impedance loads and TEE configuration for medium impedance loads.

Model BAA 600: Auto Matching based on variable air caps rated for 3000 V and 16 A analog user port pin compatible with BDS.HF 200-300 and 750 W generator's family.

The BAA600 is an auto matching unit to be used in HF (13.56 MHz) plasma application, transform the complex impedance of the load in a 50 Ohm resistive. The tuning circuit is L type using high quality variable caps and precision positioning motors. Typical tuning type is less than 2 seconds.

A wide range of full preset or one channel only preset is possible. It's also possible a full independent operation with only one external switch to recall ignition position is required.

A DC BIAS measurement circuit permits to monitor DC bias, scaled of a factor of 100.

SPECIFICATIONS

Tuning Elements	High grade air variable capacitors with high current sliding contacts. Option one vacuum capacitor in order to achieve higher cathode Voltage and current
Power supply	24 VDC 800 mA max. (from the Neyco's HF generators or via an external P.S.)
Analog I/O	10 V full scale
Digital I/O	24 VDC isolated
Input RF	N type female
Output RF	7/16 female to be used with RG393 Teflon cable
Max cathode voltage	3000 VAC + DC
Max cathode current	16 A RF
User connector	D15 pin female
Operating modes	N, female
Detector Type	Passive phase magnitude detector, signal reversing possible
Dimensions	190 x 340 x 175 mm

Direct interfacing with all Neyco's series RF generators.

3 Channel output (vacuum relays) option.

HIPMS & PULSED DC power supplies also available.

PROGRAMMABLE DC POWER SUPPLIES FOR THERMAL APPLICATIONS

FEATURES

- High power density: 3.3 kW, 5 kW, 10 kW, 15 kW
- Output Voltage up to 600 V, Current up to 400 A
- Built in RS-232 & RS-485 Interface Standard
- Advanced Parallel Operation
- Optional Interface: LXI Compliant LAN / IEEE 488.2 SCPI (GPIB) Multi-Drop / Isolated Analog Programming
- LabView® and LabWindows® drivers

DC GLOW DISCHARGE DC POWER SUPPLIES FOR PLASMA APPLICATIONS

The BDS-GLOW is a DC High Voltage Power Supply, specifically designed for plasma glow discharge. Is available in the 2000 or 4000 V with 3 kW power capacity full scale with positive or negative output.

Several protection and limiting circuits have been implemented to satisfy the most critical applications. The arc detection circuit sense plasma arcing end cause immediate shutdown and restart after an user-defined dead time. Overcurrent, overvoltage, over temperature circuits are included.

The high frequency inverter is equipped with last generation IGBT transistor obtaining mains to output efficiency greater than 90 %.

The interfacing with user application can be by analog user port or Optional RS-232. The front panel is equipped with LCD display and active front panel is available as option for local manual control. DC glow discharge DC Power supplies is **CE Compliant**.

SPECIFICATIONS

Interlock	Contact closure to enable HV output	

MF GENERATOR FOR PLASMA APPLICATIONS

The BDS-MF is a 40 kHz plasma generator with max power delivery of 5 kW or 10 kW specifically designed for plasma excitation on PECVD or plasma cleaning applications.

The unit is capable of delivery up to 10 kW (or 5 kW) at 5000 V RMS output. The output is balanced type, capable to drive 2 symmetrical electrodes. Typical application is PECVD process on large process chambers. A unique features is the high voltage matching transformer built in 2 (standard) or 3 (on request) transformer taps are available as impedance matching.

User only needs to connect two coaxial cables to the electrodes. Interface with the user's PLC can be both analog or digital RS-232 or Profibus (upon request).

MF Generator for plasma application is **CE Compliant**.

FEATURES

- Output matching transformer is built in. No external box is required.
- Air cooled unit. No risk associated with moisture or water leakage
- Full power with ambient temperature up to 40°C
- Analog interface
- Fieldbus interface available upon request
- Front panel display makes installation and troubleshooting easier
- High efficiency >90%
- Compact and lightweight construction, only 20 kg, 4UI

Ion-Guns

GRIDLESS CIRCULAR ION-GUN

The Ion-Gun boasts a long maintenance cycle - both in reactive and inert environments - and has an operational range of up to 90 mA and up to 3 kV. There is no contamination, which makes the product suitable for semiconductor applications. Other applications include substrate pre-clean, ion assist, etch/texturing and PACVD deposition. It is easy to fit, with a 1" shaft mount and outer diameter of 5", and is an ideal pair for new 3" and 4" circular full face erosion magnetrons.

FEATURES

- Inversed magnetron ion beam
- Self neutralised ion beam
- Operating pressure in large pressure range (10^{-4} to 10^{-3} mbar)
- Tilting head - ion angle control
- Stable ion beam current and ion energy distribution
- Feedback control
- Variety of gas feed possible
- No contamination
- Suitable for Semiconductor industry

ION ETCHING APPLICATIONS

- Nanotexturing
- Coating removal
- Improving coating adhesion
- ITO and silver deposition assistance
- PACVD - DLC deposition
- Ion beam deposition

Power supply available on request.

Electron-Guns

HC SERIES, HIGH CAPACITY EVAPORATION SOURCES

FEATURES

- 270° beam deflection
- Long life emitter assembly
- Easy filament replacement
- Permanent magnet beam positioning
- Multiple crucibles
- Large crucible volume
- Interchangeable crucible assemblies

The HC Series e-Gun evaporation sources deliver superior results in demanding production coating applications. Large crucibles permit long, uninterrupted evaporation runs. Disassembly and assembly are quick and easy. Maintenance time is reduced. HC e-Guns are designed to provide maximum service life.

270° BEAM DEFLECTION

The HC incorporates a proven 270° electron beam deflection system. The filament is hidden below and out of the line-of-sight of the crucible. This prevents ion erosion and provides maximum protection from shorting caused by stray particles or condensate.

LONG LIFE EMITTER ASSEMBLY

The 270° electron beam deflection design has been enhanced with a new and improved emitter assembly.

EASY FILAMENT REPLACEMENT

The emitter assembly design makes removal or replacement of the filament fast and easy. A filament alignment tool maintains critical filament tolerances, allowing quick and accurate filament replacement.

PERMANENT MAGNET BEAM POSITIONING

Primary beam position is controlled by a permanent magnet. Electromagnets are used for precise positioning and beam sweep.

MOUNTING CONFIGURATIONS

Each gun is available in three standard mounting configurations:

1. E-Gun alone with no mounting flange.
2. E-Gun with a 1" diameter bolt-type mount, which mounts through a 1" diameter hole, and is sealed by a compression O-ring.
3. E-Gun mounted on a ConFlat metal seal type flange, which uses a standard OFHC copper gasket.

Custom Mounting is available. Please consult Neyco.

UNIVERSAL INSTALLATION

An optional universal mounting adapter plate is available. The plate permits the direct mounting of HCE-Guns into existing Temescal or similar evaporation source installations.

HCR ROTARY

The HCR offers interchangeable crucible blocks, available in a variety of volumes and geometries. Five standard crucible arrangements, illustrated in Fig. 2, offer the flexibility necessary for a wide variety of source materials, applications, and processes. HC crucible block assemblies can be removed, exchanged, or replaced easily and quickly from the top of the e-Gun.

Custom: Note Fig. 2 "FIGURE 2.6" represents one custom crucible configuration. Please consult Neyco for a custom design to meet your requirements.

RC SERIES, RESEARCH CAPACITY ELECTRON BEAM EVAPORATION SOURCES

MULTIPLE CRUCIBLE ROTARY 3 KW E-GUN™

3 kW E-Gun Research Capacity series provides enhanced beam stability and efficient XY sweep with full crucible coverage. Plug-in emitter assemblies and sweep coil assemblies make the sources easier to service. The line includes a full spectrum of power supplies, sweep controllers and accessories, including crucible liners.

FEATURES

- True XY sweep with full crucible coverage
- Sweep coils included with source
- Enhanced beam culmination
- Plug-in emitter module
- Enhanced high-stability cooling
- Cross-contamination shielding
- Rugged design
- Interchangeable crucibles
- High Vacuum compatible

3 KW ROD-FED E-GUN™

The operation of the 3 kW rod-fed E-Gun is unique. The evaporant source material, in the form of a rod up to 3/8" in diameter, is fed continuously into the crucible using an external linear feedthrough. The design protects the emitter from damage and shorting during installation and service. The improved water-cooling system enhances heat transfer, which increases rate stability and prevents damage to the e-beam source.

The Rod-Fed E-Gun is designed for easy installation into MBE systems.

FEATURES

- 3 kW E-Gun source
- Fits into a CF 63 type port
- Rod-fed material for continuous evaporation
- Completely shielded emitter
- Fully UHV compatible

E-GUN POWER SUPPLIES

HIGH FREQUENCY SWITCHING

The e-Gun power supply is a high performance switch mode power supply. It operates above 20 kHz and uses the most reliable IGBT switches available. The SEB power supply is designed to optimize e-Gun performance and maximize power supply reliability in any production coating application.

CONSERVATIVE ELECTRICAL DESIGN

Power supplies are conservatively designed. Each power supply is designed to operate continuously and reliably at full power and maximum load ratings, with enough head room to accommodate the most dynamic operating characteristics and brutal operating conditions. Every power supply is dynamically tested, including repetitive arc testing, prior to shipment.

FILCHEK™ FILAMENT CHECK

FilChek is an exclusive feature included on every power supply. FilChek is a momentary switch mounted on the power supply front panel. It provides a quick, convenient, and simple test of the e-Gun evaporation source filament. Not simply a continuity check, FilChek supplies a measured, dynamic load through the filament to provide a reliable, easy-to-use, and true test of filament condition.

DYNAMIC ARC SUPPRESSION

Power supplies incorporate advanced arc detection and suppression circuits to insure maximum performance with any evaporant material.

MULTIPLE OUTPUT

Power supply is designed to power and operate up to three e-Gun evaporation sources either sequentially or simultaneously. Multiple output taps are provided at the rear of each power supply. Each power supply is shipped with one e-Gun control module as standard equipment. An additional "plug-in" e-Gun control module is required for each additional e-Gun you may wish to operate.

LOW STORED ENERGY

Power supplies maintain excellent output regulation while minimizing the amount of energy available during arc events. This permits fast arc recovery and greatly enhances e-Gun operation, performance, and reliability.

COMPATIBLE WITH OTHER EVAPORATION SOURCES

The power supplies can be used with all our e-Gun evaporation sources as well as evaporation sources from other manufacturers.

Thin Film Deposition System

The **MAGEVA** thin film deposition system is a flexible tool, which operates, **ALL IN ONE**, either in thermal evaporation or sputter deposition, or in combination of both.

MAGEVA

Compact, for a better utilization in clean room and laboratory space, the frame is equipped with wheels for quick and effortless transportation.

The stainless steel chamber, fitted with turbo and rotary pumps, allows user to change process in less than 10 minutes.

MAGEVA pumps down very quickly to high vacuum (10^{-6} mbar range).

The system is available in three versions, depending on the size of the magnetron sputtering cathode:

- MAGEVA-50
- MAGEVA-75
- MAGEVA-100

MAGEVA is suitable for both research and small lot production requirements

SAFE AND CE

Automated interlocks ensure safe operation at all times; an emergency stop button protect both operator and machine. All power distribution and system controls are enclosed in the cabinet.

MAGEVA carries the CE conformity marking.

FEATURES

- SS chamber ISO 250 x 250 mm height
- Quick-access door and viewport
- Sample holder 100 mm x 100 mm
- Gas entry with fine adjustment valve for sputtering
- Mass flow controller (Optional)
- Turbo pump 240 l/s
- Primary rotary vane pump 17 m³/h
- Primary dry pump (Optional)
- Manual gate valve ISO 100
- 2" cathode magnetron for MAGEVA-50
- 3" cathode magnetron for MAGEVA-75
- 4" cathode magnetron for MAGEVA-100
- Thermal evaporator (filament and evaporation boat holder)
- Full range gauge (10⁻⁹ to 1200 mbar)
- 6 MHz quartz sensor probe with Q-Pod
- DC power supply 1.5 kW for sputtering
- DC power supply 10 V 330 A for thermal effect
- Total dimensions (with frame) 110 cm L x 70 cm I x 140 cm H
- Weight: 90 kg

Thin Film Deposition Services

Neyco offers thin films depositions, upon your specifications on various substrates.

 See Section J -Silicon Wafers in this catalogue for additional services such as Thermal Oxidation, and Nitration.

THIN FILM DEPOSITION ON REQUEST

Our factory offers 850 m² of clean rooms equipped with 12 coating systems (sputtering, electron gun, ion assistance, and thermal evaporation).

Chambers dimensions: diameter 300 to 1400 mm.

From single substrate to large batches, on many types of materials: glass, Silicon wafer, single crystals, Stainless Steel, Nickel, Copper, Aluminum, ...

In-situ and ex-situ characterization tools: transmission, thickness, reflection, adherence

We are able to develop the thin films you need, upon your specifications.

French government accreditation «Crédit Impôt Recherche» (laboratory).

OPTICAL THIN FILMS

Wide range of optical coatings, obtained by EB evaporation. Some of highlights (spectral range from 0.3 to 15 μ):

- Antireflect (AR)
- Mirrors : with metal, dielectric, high reflexion > 99.5%
- Black coating ($R < 3\%$ in visible range)
- Dichroic filters, high-pass, low-pass...
- Optical filters

DECORATIVE THIN FILMS

Decorative coatings are obtained by vacuum evaporation or sputtering:

- Metal based (Al, Au, Ag, Ni...)
- Colors: (co-deposition, oxides...)
- Intense black

OTHER THIN FILMS

- Resistive and conductive layers
- Metallization for soldering applications
- Electronical contacts
- Thermal oxydation, nitration
- Photolithography
- ...etc

Quartz microbalance (QCM) are used to measure, in situ and in real time, the thickness of thin films during vacuum deposition.

PRINCIPLE OF USE

The measurement is based on the modification of oscillation frequency of the piezoelectric crystal due to mass overload. Thus, when a material thin film is deposited on the surface of a quartz crystal, its resonance frequency varies in a proportional way of the deposited layer mass/weight. We mainly use 5 MHz or 6 MHz AT-cut quartz. The 6 MHz quartz are dedicated to most recent deposition systems while the 5 MHz are typically used in BALZERS and equivalent evaporators.

The quartz probe has to be installed inside the vacuum chamber, close enough to the substrate where the deposition will be performed (refer to the picture below). Knowing the density of the layer, the thickness of the layer is then calculated in real time. Initial measurements as micro-weight (or nano-weight for very thin layers) or thickness on the substrate allow to pre-calibrate the system.

Neyco supplies two types of measurement chains by microbalance.

The standard one is Quartz Microbalance with Oscillator, including :

- 1 water-cooled quartz probe
- 1 watercooling feedthrough with 2 tubes + 1 coaxial cable to connect the quartz to the external oscillator
- 1 electrical oscillator mounted as close as possible to the vacuum feedthrough (thus to the quartz)
- 1 controller or monitor

The second system is the Quartz Microbalance (QCM) with a Q-pod (also known as QPOD and STM-2):

The Q-pod replaces both the oscillator and the monitor, and allows the data acquisition directly with the dedicated software.

Front Load Single/Dual Sensors

Front Load Single/Dual crystal sensors offer proven reliability and durability and have an excellent thermal stability. The front load design allows for easy insertion of the crystal holder in applications lacking sufficient room for side insertion.

Assembled mechanically rather than soldered, parts can be replaced conveniently in the field, if necessary. Sensors can be ordered individually or in a sensor/feedthrough combination that can be either welded or assembled with compression fittings.

Front load single sensor

FRONT LOAD SINGLE SENSOR CONFIGURATION

Two sensor configurations are offered: the standard version and the right angle (compact) version. The standard version is designed for installation from the side or bottom of the chamber having the cooling tubes parallel to the crystal face. The right angle version is designed for installation through the top of the vacuum system having the water cooling tubes perpendicular to the crystal face. Optionally, sensors can be ordered with a pneumatically driven crystal shutter to protect the crystal during source warm up, when not used during deposition of an alternate material, or to extend crystal life when used in sequential acquisition. The shutter is designed to flip down allowing easy crystal replacement.

FRONT LOAD DUAL SENSOR CONFIGURATION

The Front Load Dual Sensor is available in a standard mount configuration where the water tubes are parallel to the crystal face. A pneumatically driven crystal shutter comes standard to protect the back-up crystal, while the primary crystal monitors the deposition rate. The shutter is designed to flip down allowing easy crystal replacement.

For both Single and Dual Sensors, the exposed crystal electrode is fully grounded to effectively eliminate problems due to RF interference.

FEEDTHROUGHS

Neyco offers all types of feedthroughs: 1 inch bolt feedthrough, 2¾ inch (CF40) ConFlat® flange feedthrough and KF40 feedthroughs for the most popular.

FEEDTHROUGH CONNECTION

Front Load Single sensors can be ordered in combination with a feedthrough. The sensor / feedthrough connection can be either welded or made with compression fittings.

Compression fittings allow for easy adjustability without the need for brazing or welding. The feedthrough can be moved along the length of the tubes allowing the length inside the vacuum systems to be adjusted over a range of 20.3 to 121.9 cm (8 to 48 inches). Once the desired length is determined, the compression fittings allow for a finger tight tube seal. Alternately, a welded connection may be chosen. If a welded connection is desired, a sensor length specification form, must be completed prior to ordering and submitted with the order.

ADVANTAGES

- Front load crystal holder
- Easy installation
- Adjustable length if ordered with compression fittings
- Sensor/Feedthrough combinations available welded to customer specified lengths
- No brazing required if ordered with compression fittings or welded to feedthrough

SPECIFICATIONS

Maximum bakeout temperature with no water	130°C
Maximum operating isothermal environment temperature with minimum water flow	up to 400°C (according configurations)
Standard single sensor size	27 mm x 61.47 mm x 17.53 cm
Right angle single sensor size	28.19 mm x 26.92 mm x 26.92 mm
Dual sensor size	39.12 mm x 82.04 mm x 49.54 mm
Crystal exchange	Front loading; self-contained package for ease of exchange
Mounting	Two #4-40 tapped holes on the back of the sensor body
Crystal	0.550" (13.97 mm) diameter, 5 MHz or 6 MHz

Cool Drawer Single/Dual Sensors

The Cool Drawer™ Single/Dual Sensors allow crystal installation into the sensor from the side, convenient for systems with insufficient room for front load crystal installation.

The Cool Drawer™ Dual Sensor is designed for use in critical processes where it is desirable to have a second crystal in the vacuum chamber.

The sensors employ the Cool Drawer Crystal Holder which is thermally shielded by the water-cooled housing insuring excellent crystal performance.

ADVANTAGES

- No internal cables
- Cool Drawer crystal holder
- Easy installation
- Bakeable if ordered with welded CF40 flange
- Adjustable length if ordered with compression fittings
- No brazing required if ordered with compression fittings
- Sensor/Feedthrough combinations available welded to customer specified lengths

Available with:

- CF40 feedthrough
- 1" (2.54 cm) bolt feedthrough

SENSOR CONFIGURATIONS

Two sensor configurations are offered: the standard version and the right angle version. The standard version is designed for installation from the side or bottom of the

chamber and the cooling tubes and the crystal face are parallel. The right angle version is designed for installation through the top of the vacuum system and the water cooling tubes are perpendicular to the crystal face.

Single Sensor: both versions are available with or without a crystal shutter.

Dual Sensor: the sensor with the CF40 flange is pre-installed in a special two piece CF40 feedthrough. This allows the sensor head to be rotated independently of the flange and circumvents the dimensional limitations of the CF flange. Available with crystal shutter.

Cool Drawer™ crystal holder

Compression fittings allow the easy adjustability without the need for brazing or welding. The feedthrough can be moved along the length of the tubes allowing the length inside the vacuum system to be adjusted over a range of 10 to 66 cm (4" to 26").

Once the desired length is determined, the compression fittings allow for a finger tight tube seal.

When selected with the welded CF40, the sensor is designed for high temperature processes where reliability is critical. Constructed of stainless steel and ceramic materials it is suitable for applications requiring high temperature bakeout (see specifications).

FEEDTHROUGH CONNECTIONS

Cool Drawer single sensors must be ordered in combination with a feedthrough. The sensor / feedthrough connection can be either welded or made with compression fittings.

Sputtering Sensor

The Sputtering Sensor is specifically designed for use in any sputtering process. The sensor body and cooling tubes are Gold plated Beryllium Copper for maximum cooling efficiency in the sputtering environment.

A magnet built into the sensor head reduces excessive heating by energetic free electrons in sputtering systems by deflecting them with the external magnetic field.

The rear loading crystal holder design allows easy crystal replacement without having to remove the sensor head from the system.

Sputtering Sensor

FEEDTHROUGHS

Neyco offers two types of feedthroughs, either a 1 inch bolt and Ultra-Torr (compressing fitting) terminations or a CF40 welded terminations.

ADVANTAGES

- Gold plated Beryllium Copper sensor body and cooling tubes for maximum cooling efficiency
- Magnet to deflect free electrons away from the monitor crystal
- Easy installation with bendable water tubes allowing flexibility in sensor placement
- Rear load crystal insertion for easy crystal replacement

CrystalSix® Sensor

The CrystalSix® Sensor is critical for long processes demanding continuous rate control. Whether an OLED, MBE, solar, long optical coating, or other processes having an extended period between chamber venting, the CrystalSix® sensor offers the security of 6 quartz monitor crystals in one sensor head. When used with a thin film controller, the CrystalSix® automatically rotates a new crystal into position whenever the current crystal fails or becomes unstable. Crystals are automatically replaced without interrupting your process for continued deposition rate monitoring.

Crystal indexing is accomplished with a pneumatically driven mechanism. This pneumatically driven motor provides better crystal thermal stability than competitive units using expensive in-vacuum, heat generating, electric motors. 1/8" water cooling tubes keep the sensor head thermally stable and allow flexibility in sensor placement.

When used with certain thin film controllers, the sensor provides position feedback so specific positions can be used with specific materials.

ADVANTAGES

- Hold six crystals with robust, automatic switching to maximize process uptime
- Stable crystal temperature, because crystal switching is pneumatically-driven
- 1/8" (3.2 mm) tubes maintain thermal stability and allow flexibility in sensor placement
- Optional crystal shutter available

Crystal 12® Sensor

The Crystal 12® sensor is critical for long processes demanding continuous rate control. Whether an OLED, MBE, Solar or other process having an extended period between venting, the Crystal 12® sensor offers the security of 12 quartz monitor crystals in one sensor head. When used with Cygnus 2, IC6, XTC/3M, XTC/3S, SQC-310C, the Crystal 12® automatically rotates a new crystal into position whenever the current crystal fails or become unstable. Crystals are automatically replaced without interrupting your process for continuous deposition rate monitoring. To further minimize downtime, crystals can be preloaded into a second optional carousel, which can then be quickly and easily exchanged with the carousel containing the exhausted crystals, minimizing the time the system is open.

Crystal indexing is accomplished with a pneumatically driven mechanism. This pneumatic drive provides better thermal stability than competitive units using expensive in-vacuum, heat generating, electric motors. 1/8" (3.2 mm) water cooling tubes keep the sensor head thermally stable and allow flexibility in sensor placement.

When used with certain thin film controllers, the sensor provides position feedback so specific positions can be used with specific materials.

ADVANTAGES

- Hold 12 crystals with robust, automatic switching to maximize process uptime
- Easy-to-remove carousel allows fast replacement of all 12 crystals
- Stable crystal temperature, because crystal switching is pneumatically-driven
- Accommodate metric hardware
- 1/8" (3.2 mm) tubes maintain thermal stability and allow flexibility in sensor placement
- Easy-to-remove front deposition shield protects the crystals and carousel from material accumulation, minimizing the need to remove entire sensor for maintenance
- Optional mounting-post kit can be user-modified to accommodate metric hardware
- Optional crystal shutter available

Sensor Crystals for Quartz Microbalance

The quality and longevity of a crystal affect not only the accuracy of rate and thickness measurements, but also the successful completion of the process being controlled. Our quartz crystals offer proven quality and reliability with successful process runs with a wide range of materials, applications and industries.

The 6 MHz and the 5 MHz crystals are available in Gold, Silver or alloy electrodes.

We recommend Gold crystals for most applications. However, Silver crystals will provide superior performance in processes with high heat loads, such as sputtering. They may also improve the deposition of oxides. And alloy crystals are recommended for optical coating with dielectric materials and for semiconductor processes with high-stress materials.

Q-pod

THE CAPABILITIES OF A TRADITIONAL QCM AT A FRACTION OF THE SIZE AND COST

The INFICON Q-pod™ (also called STM2) transducer is a small, inexpensive, accurate way to measure thin film deposition rate and thickness.

Connect the Q-pod BNC connector to the signal cable from a QCM sensor. On the other side, a standard USB cable connects to your PC. No external oscillator or power source is required. Load the free Q-pod software on your PC. Q-pod software displays rate, thickness, frequency, crystal life, and a graph of rate versus time, for up to 8 Q-pods simultaneously.

Sensor	Non-shuttered single QCM sensor
Frequency range	5.0 to 6.0 MHz
Frequency resolution	0.03 Hz at 6 MHz
Frequency accuracy	0.002 %
Frequency stability	±2 ppm total, over 0°C to 50°C
Input	BNC
Interface & power	USB, v2.0 or later
Size	114 x 75 x 25 mm
Weight	57 g
Software included	Provides display and setup of all operating parameters

XTC/3 Series Thin Film Deposition Controllers

Thin film deposition controller for single and multiple-layer processes.

The XTC/3 with patented ModeLock provides proven prevention for consistent quality. With the XTC/3 Thin Film Deposition Controller, you get highly accurate control of deposition rate and thickness, the capacity for virtually any number of layers, easy installation, and extremely high reliability to ensure productivity.

FEATURES

- Available in single-layer and multiple-layer models
- Patented ModeLock technology prevents film thickness errors caused by mode-hopping
- Supports INFICON Crystal 12®, CrystalSix® and dual sensor automatic crystal switching for maximum productivity
- XTC/3M multiple-layer model supports up to 99 processes, 999 layers, 32 films, 2 sensors and two sources
- XTC/3S single-layer model supports up to 9 films, 2 sensors and two sources
- Easy-to-read TFT LCD graphics displays
- Films and processes can be assigned unique, descriptive names for easy retrieval
- Ethernet connection available
- Free-standing (no computer necessary) or optional Windows® software for PC operation

SQC-310 Series Thin Film Deposition Controllers

With advanced electronics and an improved display, the INFICON SQC-310 Series gives you features not found on competitors' thin film controllers. And you can choose the ideal model for your application: sequential deposition (SQC-310) or co-deposition (SQC-310C).

FEATURES

- Bright, color LCD display
- Standard RS-232 and USB (with Ethernet option)
- Easy setup and operation with a "Quick Setup" Menu, 6 context-sensitive push buttons, and convenient parameter setting knob
- Windows® program for developing, testing, and downloading processes, and for logging instrument data to your PC for process analysis and quality control
- Accurate process control, especially for low deposition rates, with ± 0.03 Hz resolution at 10 readings/second, and with ± 2 ppm frequency stability over 0°C to 50°C
- Storage capacity for up to 100 processes, 1000 layers, 50 films
- Monitoring of source material with a single sensor or with multiple sensors to provide accurate source distribution monitoring

SQM-160

Multi-Film Rate/Thickness Monitors

The SQM-160 uses proven INFICON quartz crystal sensor technology to measure rate and thickness in thin film deposition processes. Two sensor inputs are standard and four additional sensor inputs are optional. Two recorder outputs provide analog rate and thickness signals.

Sensor inputs can be assigned to different materials, averaged for accurate deposition control in large systems, or configured for a dual sensor. The rate sampling mode allows a shuttered sensor to extend sensor life in high rate processes. Rate displays of 0.1 Å/s or 0.01 Å/s are user selectable. In addition, Frequency or Mass displays can be selected. Four relay outputs allow the SQM-160 to control source or sensor shutters, signal time and thickness setpoints, and signal crystal failure. Digital inputs allow external signals to start/ stop and zero readings.

The SQM-160 comes with an RS-232 port and Windows® software that allows instrument setup from your computer. The software can be used to set and store all parameters, operate the instrument, and save process data in an Excel® file format. USB or Ethernet options add to the communications flexibility.

Two menus control instrument setup for the 99 stored films.

Standard frequency resolution is 0.12 Hz at four readings per second. The high accuracy SQM-160H option increases resolution to 0.03 Hz at 10 readings per second. Temperature stability is 2ppm over the entire operating range.

Density and Acoustic Impedance Values

We have compiled a list of some popular materials used in the vacuum industry and provided their material density and acoustic impedance values. This table has been compiled in combination with the PHYSICS HANDBOOK and actual customer experience. Although we have made every effort to test them, Neyco cannot guarantee

the accuracy of these values.

The Z factor found on most controllers and monitors is calculated with the ratio of the acoustic impedance of crystal quartz and the selected materials. ie: Z factor for $\text{SiO}_2 = 1$

Manufacturing & Quality

Manufacturing and offering technical support in vacuum and inorganic materials require a strong scientific background and a strong organization.

To ensure the best answers to your needs as well as a consistency over years, Neyco uses the ISO 9001 Quality Management System.

ISO 9001 and ISO 14001 Management Systems enable Neyco to trace all new materials, to active all certificates of analysis, to ensure that all deliveries match with specific needs within the strict respect of our environment.

MANUFACTURING

- Vacuum melted targets.
- Vacuum melted pellets.
- Vacuum melted alloys for targets, pellets, pieces and sprayed powders.
- Inert Gas Hot Pressing for targets and evaporation pieces (uncalibrated) with HIP quality to minimize gaseous inclusions.
- Mechanical machining of targets, backing plates with tolerances for flatness and overall dimensions.

STOCK AND DELIVERY SERVICE

Extensive stock holdings, efficient computerised stock control and a well organised packing and dispatch department, contribute to the company's reputation for fast efficient service.

ANALYSIS

All our materials are delivered with a specific quantitative analysis. Analysis equipment depends on the total of impurities.

- GDMS (Glow Discharge Mass Spectroscopy) is to be chosen for purities > 99.999% (for MBE materials or very strict applications).
- MS (Mass Spectroscopy) is the general analysis for 99% to 99.99% (such as ICP).
- For non-metallic impurities (such as O₂, C...) we use LECO equipment.

The Certificate of Analysis provided with each lot assures that the final product meets or exceeds the exact specifications.

ISO 9001:2008 certificate

ISO 14001:2004 certificate

NEYCO is also equipped with a X-fluorescence analyzer (XRF analysis) enabling us to verify the alloys composition as well as to confirm integrity of the packed materials.

A green round sticker is then added on the external packaging once the FLUO-X is positively done.

TRACEABILITY

Each single order (without any minimum amount) has its own internal file number related to both a paper file and a SAP file. Manufacturing process and requested dimensions are noted on this file as well as specific requirements (density, particle size, impurities to avoid...). One can always refer to a previous order (within five years) and we shall then have all the necessary information to reproduce the manufacturing process or even improve when possible.

Each lot number is thus related to an analysis which is kept in our files for a minimum period of five years after manufacturing.

STANDARDS

Neyco started in 1988 the Assurance Quality process in order to settle firm bases of quality, for our own working way as well as for customer. We started with the ISO 9002 Certification, then obtained the ISO 9001 Certification in 2001 and we recently improved with the ISO 14001 Certification. All our certifications are given by AFNOR-AFAQ as a well-known certification organization. We maintained over the years the Quality meetings on a monthly basis, and all non-conformities, modifications, quality improvements, new ideas... are discussed during these meetings, meaning that everyone is correctly informed and trained for customer's satisfaction as well as personal development which should go together.

REACH COMPLIANCE

REACH (Registration, Evaluation and Authorisation of Chemicals), the most significant change in the European Union's (EU) chemical management history, started in June 2007. REACH is a EU regulation, which applies to all materials circulating in European Union becoming by the law global compliance matter.

REACH aims to **better protect human health and the environment** as well as enhance the competitiveness of the chemical industry by fostering innovation.

Neyco pre-registered substances in its current portfolio for which it has responsibilities and obligations to match REACH requirements.

The CLP Regulation (Regulation (EC) No 1272/2008) is the European Regulation on Classification, Labelling and Packaging of chemical substances and mixtures. The legislation introduces, throughout the EU, a new system for classifying and labelling chemicals, based on the United Nations' Globally Harmonised System (UN GHS). Correct and unambiguous substance identification is essential for Neyco:

- Each hazardous chemical product is delivered with a MSDS (Material Safety Data Sheet).
- Each container of hazardous chemical product is labelled as specified in the CLP Regulation.

ETHICAL CHART

We, at Neyco, consider that there is no business without human values and we are committed to :

- Enhance individual development and create good balance between personal life and work.
- Perform human management to avoid internal stress and hard feelings.
- Strictly prohibit false promises and twisted truths.
- Attribute a consequent yearly budget for national NGO (ie. "Abbé Pierre", "Restaurants du Coeur").
- Attribute a consequent yearly budget for international NGO (ie. "Salvation Army", "Red Cross").
- Develop an ecofriendly business by a continuous tracking of our various consumptions.
- Built a long term relationship with our partners as well as with our employees.
